

ProGround Land Management

The identity system: logo, color, type, imagery and voice.
Built from the mark, aligned to the business.

Owner	Andrew Lee
Founded	October 2025, Denham Springs, Louisiana
Character	Professional. Trustworthy. Premium.
Prepared by	Flower Bloom Studios
Date	August 14, 2026

Companion document to the ProGround Website Build Manual.
Where the two disagree, this document governs appearance.

The brand at a glance

Everything in this document exists to make one impression repeatable: that ProGround is the most professional company a property owner in Greater Baton Rouge could hire, and is worth more than the cheapest bid.

What the business is

ProGround Land Management is a locally owned landscaping and property maintenance company based in Denham Springs, serving Greater Baton Rouge, Livingston Parish and Ascension Parish. It renovates and installs landscapes, solves drainage and grading problems, and maintains residential and commercial properties under recurring agreements. It is owner operated by Andrew Lee, who personally meets customers, estimates work and plans jobs.

The three words

Professional

Written scopes, scheduled work, organized follow up. The visual system has to look like a company that operates that way: ordered, precise, nothing accidental.

Trustworthy

Real photographs, real prices, real reviews, a real face. Nothing exaggerated, nothing hidden, no claims the business cannot back.

Premium

Space, restraint and quality of execution. Premium is not gold trim. It is the confidence to leave things out.

Who it speaks to

Established homeowners and property owners who value reliability and communication over the lowest price, plus the commercial audience of business owners, property managers, HOA boards and facility managers. This audience reads before it buys. It responds to evidence and calm, and it is repelled by urgency tactics, discount stickers and clutter.

The one sentence test

Before anything ships, ask: would this look at home on a proposal that costs \$7,500. If the answer is no, it is not ProGround.

The logo

| Primary lockup

Primary lockup on Deep Field. This is the default application.

Anatomy

The mark has four parts, and each one is doing a job worth protecting.

- **The leaf pair.** Growth and landscape. The larger leaf with a smaller shoot below it reads as establishment rather than as a single sprout.
- **The blue stem.** Water running through the plant. This is the most valuable detail in the mark, because water is the thing ProGround does that mow and blow companies cannot. It is why blue is protected as its own functional color in Section 03.
- **The divider rule.** A vertical blue line separating the mark from the wordmark. It sets the alignment and it is the origin of the line motif used across the brand.
- **The wordmark.** PROGROUND in a heavy condensed grotesque, with LAND MANAGEMENT set below in wide letterspaced green caps. That two register structure, heavy over spaced, is the typographic signature and it repeats in headings throughout the website.

Clear space

Minimum clear space equals the cap height of the P in PROGROUND, on all four sides.

Nothing enters that zone. Not text, not a photo edge, not another logo, not a border. On a business card or a yard sign where space is tight, reduce the logo rather than the clear space.

The mark alone

Icon use only.

The leaf and stem may be used without the wordmark **only** where the name appears elsewhere on the same surface, or where the space is too small for the wordmark to be legible: favicon, app icon, social profile picture, truck door secondary placement, a repeating watermark on photography.

The mark alone is never used on the website header, on a business card front, on a yard sign, or on any first introduction to someone who does not already know the company. A new company does not have the recognition to drop its own name.

Minimum sizes

APPLICATION	MINIMUM	NOTE
Full lockup, digital	180 px wide	Below this, LAND MANAGEMENT stops being readable
Full lockup, print	1.5 inches wide	Letterhead, business card, invoice
Mark alone, digital	32 px	Favicon at 32, 48, 180 and 512 px
Mark alone, print	0.4 inches	Embroidery needs 0.75 inches minimum
Vehicle and signage	No maximum	Keep the clear space proportional at any size

Required file variants

The supplied artwork is a raster image on a dark square. That is enough to launch a website and not enough to run a business. Produce this set before any print, vehicle or signage work.

VARIANT	FORMAT	USED FOR
Full color on dark	SVG and PNG	The default. Website header, footer, dark materials.
Full color on light	SVG and PNG	PROGROUND set in Deep Field instead of white, LAND MANAGEMENT in Turf Deep so it stays legible on Bone. Do not simply place the dark version on a white background.
One color white	SVG and PNG	Photography overlays, embroidery on dark shirts, single color print.
One color Deep Field	SVG and PNG	Invoices, faxable documents, single color stamps, light shirts.
Mark only	SVG, PNG, ICO	Favicon set, app icon, social avatar, watermark.
Horizontal and stacked	SVG	The stacked version, mark above wordmark, is needed for square placements such as a social avatar or a shirt back.
Vector master	AI or EPS	Required by every sign shop, vehicle wrap shop and embroiderer. This is the highest priority item on the list.

Misuse

Never stretch or compress

Never rotate or tilt

Never desaturate the full color version

- Never recolor the leaf, the stem or the divider. The green and blue relationship is the identity.
- Never place the white wordmark version on a light background or on a pale photograph.
- Never add a drop shadow, glow, bevel, outline or gradient.
- Never set the logo on a busy area of a photograph. Use a solid Deep Field panel or a scrim.
- Never rebuild the wordmark in a different typeface, and never letterspace or condense it further.
- Never separate the leaf from the divider rule in the horizontal lockup.
- Never enclose the logo in a box, badge, circle or ribbon that is not part of the artwork.
- Never use the dark square as if it were part of the logo. It is a background, not a container.

SECTION 03

Color

The palette is taken directly from the logo artwork and then extended into a working system. The logo greens are sampled values, not approximations. The extended colors exist because the logo alone cannot build a legible website.

Core palette

Deep Field

#0B0E15

RGB 11 14 21

CMYK 48 33 0 92

The base. Headers, footers, dark bands, primary buttons on light.

ProGround Green

#01F001

RGB 1 240 1

CMYK 100 0 100 6

The logo green, sampled exactly. Reserved for the mark itself.

Survey Blue

#1264D0

RGB 18 100 208

CMYK 91 52 0 18

The stem and divider. Water, drainage and grading only.

Bone

#F5F6F3

RGB 245 246 243

CMYK 0 0 1 4

The page. A warm off white, never pure white for large areas.

Growth Green

#0FD40F

RGB 15 212 15

CMYK 93 0 93 17

The interface accent. Only on dark surfaces.

Turf Deep

#0B6B12

RGB 11 107 18

CMYK 90 0 83 58

Green text on light backgrounds. The only legible option.

Extended palette

Field Slate

#131926

Raised surfaces on dark

Hairline

#1F2736

Borders and rules on dark

Sky Blue

#3B8BEE

Blue on dark surfaces

 Steel #A8B3C7 Secondary text on dark	 Graphite #3F4A5C Secondary text on light	 White #FFFFFF Cards on Bone, wordmark on dark
--	---	---

The rule that matters most

The logo green does not work as text on light backgrounds

ProGround Green on Bone measures 1.4 to 1 for contrast. The accessibility floor for normal text is 4.5 to 1. It fails by a wide margin, and so does Growth Green at 1.9 to 1. This is the single most common way a bright green brand gets built badly. Use **Turf Deep** for any green text on a light background. Keep the bright greens for dark surfaces, for large shapes and for the mark itself.

Verified contrast

PAIRING	RATIO	VERDICT	USE FOR
Deep Field on Bone	17.8 to 1	Pass	All body text on light pages
Graphite on Bone	8.3 to 1	Pass	Secondary and caption text on light
Turf Deep on Bone	6.2 to 1	Pass	Green text, links and eyebrows on light
Survey Blue on Bone	5.1 to 1	Pass	Drainage and water content on light
White on Deep Field	19.3 to 1	Pass	All body text on dark bands
Growth Green on Deep Field	9.6 to 1	Pass	Eyebrows, accents, buttons on dark
Steel on Deep Field	9.1 to 1	Pass	Secondary text on dark
Sky Blue on Deep Field	5.6 to 1	Pass	Water content on dark
Survey Blue on Deep Field	3.5 to 1	Large only	Headings above 24 px and graphic shapes, never body text
Growth Green on Bone	1.9 to 1	Fail	Nothing. Do not use.
ProGround Green on Bone	1.4 to 1	Fail	Nothing. Do not use.

Proportion

Roughly **70 percent Bone and white, 20 percent Deep Field, 7 percent photography accents, 3 percent green and blue combined**. Green is a highlighter, not a paint. If a layout looks like a green website, there is too much of it. The restraint is what reads as premium, and it is what separates ProGround from every neon green lawn care template on the market.

| Color meaning, enforced

- **Green means growth work:** renovation, installation, planting, mulch, maintenance.
- **Blue means water work:** drainage, grading, catch basins, pipe, flow diagrams, the yard water diagnostic.
- That split is not decoration. It teaches a visitor in seconds that this company does two different things, which is Andrew's second differentiator made visual. Never use blue as a generic link color or green as a generic highlight, or the meaning collapses.

SECTION 04

Typography

The wordmark is a heavy condensed grotesque over wide letterspaced caps. The type system extends that relationship rather than imitating it, and adds a monospace face because this business measures things.

The three faces

ROLE	FACE	WHY THIS ONE
Display	Archivo, variable	A grotesque with a real width axis, so headlines can be compressed to echo the wordmark's proportions without copying the logo letterforms. Set at width 88 and weight 800 for the largest headings. Open source and self hostable.
Body	IBM Plex Sans	Engineered rather than decorative, with excellent legibility at 17 px on a phone screen in daylight. It carries a slightly technical tone, which suits a company that grades ground and moves water. It does not look like the default sans every competitor uses.
Data	IBM Plex Mono	The detail that makes the system feel considered. Prices, measurements, phone numbers, photo captions, form helper text, service area labels. The reference is a survey drawing and a written scope of work.

Scale

STYLE	SETTING	DESKTOP	MOBILE	USE
Display	Archivo 800, width 88, tracking minus 2 percent	60 to 76 px	34 to 40 px	H1
Section	Archivo 700, width 90	36 to 44 px	26 to 30 px	H2
Subhead	Archivo 600	22 to 26 px	19 to 21 px	H3, card titles
Eyebrow	Archivo 600, caps, tracking 18 percent	12 px	11 px	Section labels. Mirrors LAND MANAGEMENT.
Lead	Plex Sans 400, line height 1.55	21 px	19 px	Opening paragraph of every page
Body	Plex Sans 400, line height 1.65	17 to 18 px	17 px	All paragraphs
Data	Plex Mono 500	13 to 15 px	13 px	Prices, captions, measurements
Price figure	Plex Mono 600	32 px	26 px	The starting price on service pages

Rules

- Body text never drops below 16 px anywhere, on any device.
- Line length between 60 and 75 characters. Wider than that and a paragraph stops being read.
- Sentence case for headings. All caps only for eyebrows and small labels, always with wide letterspacing.
- Never set body text in Archivo, and never set a headline in Plex Sans.
- Prices, phone numbers and measurements are always monospace. That consistency is a large part of what will make the site feel expensive.
- Both families are self hosted as variable woff2 files. No third party font origin, ever, for performance and for layout stability.
- Print and documents fall back to the same two families. Where a system font is unavoidable, use Arial rather than substituting a lookalike.

Graphic language

The contour motif

The single graphic device for the brand is the **contour line**: thin, evenly weighted lines that describe ground. It comes from the vertical divider rule in the logo and from the world the business actually works in, which is survey drawings, grade elevations and water flow.

- Line weight of 1 to 2 px on screen, 0.5 pt in print. Always the same weight within one piece.
- Used as section dividers, as a subtle field behind dark bands at low opacity, as a frame corner on photography, and as the drawing style for any diagram of drainage or grading.
- On light backgrounds the lines are Hairline grey or Turf Deep at low opacity. On dark they are Growth Green or Sky Blue at low opacity.
- Contour lines describing water always use blue. Contour lines describing ground or planting use green or grey. Consistency here quietly teaches the visitor the color code from Section 03.
- Never fill contour shapes with gradients. Never animate them into moving waves. They are drawings, not decoration.

Shape and form

- Corner radius of 0 to 4 px. Nothing rounder. Rounded pill shapes read as consumer software, not as a land contractor.
- Borders over shadows. A one pixel border in Hairline or a light grey does the work of an elevation shadow without the softness.
- No gradients anywhere except an image scrim, and that scrim is a straight black fade at 0 to 60 percent.
- Icons are line drawings at a consistent stroke weight, never filled, never three dimensional, never emoji.

Photography

- **Only real ProGround work.** No stock imagery in any brand application, including social. A local audience recognizes a lawn that is not from here.
- Wide establishing shots from the curb, the angle a buyer imagines their own house from.
- Before and after pairs shot from an identical position, same framing, same time of day. This is the most valuable asset the brand owns.
- Detail shots that show craft: a cut bed edge, mulch meeting turf in a clean line, a basin set flush with the grade.
- Warm late afternoon light. No harsh midday sun, no blown highlights, no heavy filters, no oversaturated greens.
- People appear working, not posing. Andrew appears as himself, on a property, without sunglasses.
- Every published image gets descriptive alternative text naming the service and the place.

Voice and messaging

How ProGround sounds

Direct, specific and calm. It explains rather than sells. It uses numbers where numbers are true. It never oversells, because the audience it wants is the audience that distrusts overselling.

SOUNDS LIKE PROGROUND	DOES NOT
Standing water in your backyard is usually a grading problem, not a grass problem.	We are passionate about transforming outdoor living spaces.
Renovations start at \$750. What moves the number is bed size, plant size at install, and how much has to come out first.	Affordable prices and unbeatable value.
You get a written estimate with a defined scope. You approve it. We schedule it and tell you when we are coming.	Quality workmanship and exceptional customer service you can trust.
We are not the cheapest. We plan the job properly and build something that lasts.	Best prices in Baton Rouge, call now.

Rules

- Second person. Talk to the property owner about their property.
- Short sentences. Plain verbs. No stacked adjectives.
- **No exclamation points.** Anywhere. This one rule does more for the premium positioning than any design choice.
- Andrew speaks in first person on the about page and in quotes. Everywhere else the voice is we.
- Never use the phrase quality and service as a selling point.
- Never claim licensed, certified, insured, award winning, family owned, veteran owned, BBB accredited, or any number of years, employees or jobs other than the ones on this page.

The three message pillars

1. **Simple and predictable.** Recurring agreements, scheduled service, automatic billing and clear scopes instead of calling someone every time.
2. **We maintain it and we improve it.** Maintenance plus renovations, drainage, grading, installation and seasonal work. One company instead of several.
3. **A professional process.** Written estimates, defined scopes, organized scheduling, digital approvals, professional follow up.

Approved boilerplate

Short, 25 words

ProGround Land Management is a locally owned landscaping and property maintenance company in Denham Springs, serving Greater Baton Rouge with renovations, drainage solutions and year round property care.

Medium, 50 words

ProGround Land Management is a locally owned landscaping and property maintenance company based in Denham Springs, Louisiana. We renovate and install landscapes, solve drainage and grading problems, and maintain residential and commercial properties across Greater Baton Rouge under written scopes, scheduled service and predictable monthly billing. Free estimates, same day response.

Long, 100 words

ProGround Land Management is a locally owned landscaping and property maintenance company based in Denham Springs, Louisiana, serving Baton Rouge, Prairieville, Walker, Central and the surrounding parishes. We renovate and install landscapes, correct drainage and grading problems, and maintain residential and commercial properties year round.

Owner Andrew Lee is personally involved in every estimate and every job plan. Customers get a written estimate with a defined scope, digital approval, organized scheduling and professional follow up, so they always know what is being done, what it costs and what happens next. Free estimates and same day response.

Google Business Profile description

Front loads the city and the service. Contains no website address, no phone number and no capitalized shouting, because Google rejects all three.

Landscaping and property maintenance in Denham Springs and Greater Baton Rouge. ProGround Land Management is a locally owned company serving Baton Rouge, Denham Springs, Prairieville, Walker, Central and the surrounding parishes of Livingston, East Baton Rouge and Ascension. We handle landscape renovations, landscape installation, drainage solutions, grading and yard leveling, landscape bed cleanups, mulch and pine straw installation, decorative rock, commercial grounds maintenance and Christmas light installation. Recurring residential and commercial property maintenance agreements are available with scheduled service and predictable monthly billing. Owner Andrew Lee is personally involved in every estimate. Free estimates and same day response.

Tagline candidates

Andrew has not chosen a tagline. These are proposals, none of them approved. Whichever he picks becomes locked and is used everywhere, or none is used at all. An inconsistent tagline is worse than no tagline.

CANDIDATE	WHAT IT DOES
Maintained. Improved. Handled.	States the second differentiator in three words and matches the three word rhythm of the brand character.
We read the ground.	Owens drainage and grading, which is the capability competitors do not have. Distinctive, slightly technical.
Property care, on a schedule.	States the recurring agreement value directly. The most commercial of the three.
Done right, on the day we said.	Speaks to the real complaint about this trade. Only usable if the business can defend it every time.

Applications

APPLICATION	SPECIFICATION
Website	Light Bone base with Deep Field bands used as punctuation four or five times per page. Full specification in the Website Build Manual, Section 08. The site is not a dark site, even though the logo lives on dark.
Truck and trailer	Full color lockup on the dark cab or on a Deep Field panel, largest legible size, with the phone number in Plex Mono below it and the service line reading Landscaping and Property Maintenance. Add the service area line: Baton Rouge and Denham Springs. Never the street address. This is a moving billboard in exactly the neighborhoods the business wants.
Yard sign	Deep Field background, full color lockup, phone number in Plex Mono at the largest size that fits, and one service line. Nothing else. A yard sign is read at 30 miles an hour from 40 feet, so three elements maximum. Place after every renovation, with the customer's permission.
Shirts and hats	Dark garments with the full color or white lockup on the left chest and the mark alone or the wordmark across the back. Embroidery needs the vector master and a minimum 0.75 inch mark. Crew appearance is part of a premium positioning.
Business card	Deep Field front with the lockup centered and nothing else. Bone reverse with name, title, phone, email and service area in Plex Mono. No street address. Uncoated or soft touch stock, never glossy.
Estimates and invoices	The most underrated brand surface in this business, and Andrew's third differentiator lives here. Bone paper, one color Deep Field lockup at the top, Plex Mono for every figure, a clearly headed scope of work section, and the warranty statement reproduced word for word at the foot. A customer comparing three bids will notice this before they notice the website.
Email signature	Name, Owner, ProGround Land Management, phone, public email, service area line. Logo at 180 px wide. Plain text fallback with no images. No inspirational quote, no social icon wall.
Social profiles	Mark alone as the avatar on Deep Field, since the wordmark is illegible at avatar size. Cover image is a wide finished property shot with the lockup in a corner on a scrim. Bio uses the 25 word boilerplate.
Door hangers and mailers	Deep Field header band with the lockup, Bone body, one before and after pair, three services, phone in Plex Mono, and one honest offer. No starbursts, no fake urgency, no clip art.

SECTION 08

Handoff tokens

Paste this into the project so no color or size is ever eyeballed.

```

```

Governance

Before anything goes to print or vinyl

CHECK

- ☐ The vector master exists. Nothing goes to a sign shop, wrap shop or embroiderer without it.
- ☐ The correct variant is used for the background it sits on. The light background version is not the dark version pasted onto white.
- ☐ Clear space equal to the cap height of the P is respected on all four sides.
- ☐ The logo is not stretched, rotated, recolored, shadowed or outlined.
- ☐ Green text on a light background is Turf Deep, never Growth Green and never the logo green.
- ☐ Blue appears only on water, drainage or grading content.
- ☐ Prices, phone numbers and measurements are set in the monospace face.
- ☐ The phone number reads (225) 324-8252 in that exact format.
- ☐ The business name reads ProGround Land Management, spelled exactly that way, with no street address anywhere.
- ☐ No exclamation points, no banned claims, no invented credentials.
- ☐ Every photograph is real ProGround work.
- ☐ CMYK values are treated as approximate. Request a printed proof before any large run, especially for the greens, which shift noticeably in process printing.

A note on the greens in print

ProGround Green sits well outside the range that four color process printing can reproduce. On paper it will come back duller and slightly darker than it appears on screen. For anything where the green must match across materials, such as vehicle vinyl next to a printed sign, specify a spot color and match it to a physical sample rather than trusting a screen. Get the vector master built first, then have a printer pull the closest spot match and approve it in daylight.

Who owns what

- Andrew owns the brand and approves every change to this document, every tagline decision, and every claim made in his name.
- Flower Bloom Studios maintains the file set, the digital tokens and the website implementation.
- This document is version 1.0. Any revision gets a new version number and a date, and the previous version is archived rather than overwritten.

- Outstanding before this system is complete: the vector master, the light background variant, the favicon set, the tagline decision, and confirmation of the insurance question raised in the Website Build Manual.
