

ProGround Land Management

The complete design, content and local search build manual.
Every page, every word, every feature, specified.

Client	Andrew Lee, Owner
Domain	progroundland.com
Market	Greater Baton Rouge, Livingston, Ascension
Target	60+ indexable pages, top of local and niche search
Prepared	August 14, 2026

Confidential. Prepared for the ProGround build only.
Feed Part A to Claude Design. Feed Part B to Claude Code.

CONTENTS

What is in this manual

Part A is the design and content brief. Part B is the technical build brief. Sections run in build order. Nothing here is optional.

- 00 Prime directives and the rules that override everything
- 01 Business dossier: the verified facts of ProGround
- 02 Positioning, messaging and voice
- 03 Keyword map: 78 targets mapped to owning pages
- 04 Site architecture: the 48 page inventory
- 05 Page briefs: homepage and core service pages
- 06 Page briefs: location pages and the local fact bank
- 07 Page briefs: audience pages, money pages, resources, utility pages
- 08 The design system: how the site should look and move
- 09 Signature features: the things competitors do not have
- 10 The lead engine: forms, logic, routing
- 11 Technical search foundation and structured data
- 12 Performance budget and Core Web Vitals
- 13 Accessibility standard
- 14 Conversion rules that apply to every page
- 15 Assets required from Andrew
- 16 Build order and verification checklist
- 17 Off site action list for the human
- 18 Paste block: the opening prompt for Claude Design

Credential warning, read first

The intake form Andrew submitted contains his GoDaddy account password in plain text. That password must never be copied into this manual, into any build prompt, into a repository, or into any file that leaves your machine. Move it into a password manager, do the domain transfer, then have Andrew change the password and turn on two factor authentication. Treat the intake PDF itself as a sensitive document.

Prime directives

One measure of success: ProGround ranks at the top of organic and map results for landscaping, drainage and property maintenance searches across Greater Baton Rouge, and that traffic turns into submitted forms. These rules outrank every other instruction in this document.

Non negotiable

1. **Fabricate nothing.** No invented reviews, names, awards, certifications, license numbers, project counts, square footage, years, or local facts. ProGround has no licenses, no manufacturer certifications, no association memberships, no BBB rating and no awards. Do not imply otherwise anywhere on the site. If a real detail is missing, stop and ask once.
2. **Never name the tech stack.** Not in copy, headings, meta, alt text, schema, filenames or URLs. The site is positioned as custom design and development by the studio.
3. **Every page must be genuinely unique.** A set of near duplicate city pages with the town name swapped is a doorway page pattern. Google penalizes it, and it ranks worse than a small honest site. Section 06 gives each city its own real facts so this never happens. If a page cannot be made genuinely distinct and useful, do not build it.
4. **The address is hidden.** ProGround travels to customers and has no signage at 10158 Forrest Delatte Rd. The street address must not appear on the website, in schema, or on the Google Business Profile. Publish the city and parish only. This is a Google requirement for a service area business, not a preference.
5. **Name, phone and hours are byte identical everywhere.** One spelling, one phone format, one hours statement, matching the Google Business Profile exactly. Inconsistent contact data is the most common reason local rankings stall.
6. **Never break a URL.** Once a page ships, its address is permanent. If something truly must move, redirect the old address to the new one with a 301.
7. **No black hat anything.** No keyword stuffing, hidden text, spun city pages, purchased links, or fake reviews.
8. **Do not touch DNS or email.** Andrew's business email runs on progroundland.com. Changing mail records will break his inbox. Flag every DNS action for the human to perform.
9. **Promise no positions and no dates.** Section 17 states honest timelines. Google controls both.

Two documents, two tools

Part A covers sections 01 through 10: the business, the message, the architecture, the page content, the visual system, the signature features and the lead engine. This is what goes into Claude Design. Design and content are approved with Andrew before any technical work starts.

Part B covers sections 11 through 17: structured data, performance, accessibility, the verification checklist and the off site list. This is what goes into Claude Code once the design is signed off.

Business dossier

Everything below came from Andrew directly. This is the only version of the facts. If a build decision needs a fact that is not on this page, ask before inventing it.

Identity and contact

FIELD	VALUE, USE EXACTLY AS WRITTEN
Business name	ProGround Land Management
Owner	Andrew Lee, owner operator, personally involved in estimating and job planning
Opened	October 2025
Experience	5+ years in lawn, landscape and property maintenance
Base city	Denham Springs, Louisiana (Livingston Parish)
Street address	On file, hidden from the public site . Service area business.
Phone	(225) 324-8252 Texting accepted. Use this one format sitewide.
Public email	info@progroundland.com
Form delivery	andrew@progroundland.com (never displayed on the site)
Hours	Open 24/7. Present as: inquiries answered 24/7, same day response.
Response time	Same day
Ownership badge	Locally owned. This is the only ownership claim available.
Team	Owner operated with crew help as needed, one dedicated work truck, commercial grade equipment
Proof number	100+ homes served. Use this figure and no other.
Google profile	Verified, owned by Andrew, category set to Landscaper
Instagram	instagram.com/proground_land_mgmt
Facebook	facebook.com/profile.php?id=61590852360292

The service catalog

Fifteen services in four families. Every one gets coverage on the site. The five money services get their own full page. The rest live as detailed sections inside a parent page, each with its own anchor link and its own schema entry.

SERVICE	PAGE	STARTING PRICE	WHAT IT IS, IN ANDREW'S WORDS
---------	------	----------------	-------------------------------

Landscape Renovations	Own page	From \$750	Refresh and transform outdated or overgrown landscape beds with new plants, mulch, edging and improved layouts.
Landscape Installation	Own page	From \$750	Complete installation of plants, shrubs, mulch, rock, edging and other landscape features for new or existing properties.
Drainage Solutions	Own page	From \$1,000	Installation of catch basins, drainage pipe and other systems designed to reduce standing water and improve water flow.
Grading and Yard Leveling	Own page	From \$750	Correct low spots, uneven areas and poor drainage by reshaping and grading the property for better water movement.
Annual Property Maintenance	Own page	From \$145/mo	Recurring property care that keeps lawns and landscapes clean, maintained and presentable throughout the year.
Residential Lawn Mowing	Section	Within plan	Professional mowing, edging, trimming and blowing on a recurring schedule.
Commercial Lawn Maintenance	Own page	Custom	Reliable mowing and grounds maintenance for businesses, offices, storage facilities and commercial properties.
Large Property Mowing	Section	From \$250	Cutting and maintaining larger fields, lots and overgrown properties.
Hedge and Shrub Trimming	Section	Within plan	Routine trimming and shaping to keep shrubs and hedges neat and controlled.
Landscape Bed Maintenance	Section	Within plan	Weed removal, cleanup, pruning and general upkeep of landscape beds.
Hard Surface Weed Control	Section	Within plan	Treatment of weeds growing through cracks and joints in driveways, sidewalks, curbs and other hard surfaces.
Mulch Installation	Own page	From \$350	Bed preparation and installation of fresh mulch to improve appearance and help protect landscape beds.
Pine Straw Installation	Shared page	From \$350	Installation or refreshing of pine straw in existing landscape beds.
Decorative Rock Installation	Shared page	From \$500	Installation of landscape rock or gravel for beds, borders, drainage areas and low maintenance spaces.
Landscape Bed Cleanup	Own page	From \$350	Removal of weeds, debris, dead material and overgrowth to restore neglected landscape beds.
Christmas Light Installation	Own page	From \$300	Professional holiday light installation and removal for a clean, hassle free Christmas display.

Mandatory pricing footnote

This exact sentence appears under every price block on the site, in Andrew's own words: *Pricing varies based on property size, materials, accessibility, service frequency, and project scope. Free consultations and customized estimates are available.*

Revenue priorities

Top three by revenue: **Landscape Renovations, Landscape Installation, Drainage Solutions**. The one Andrew wants more of is **Landscape Renovations**. That single fact drives the whole architecture. Landscape renovation gets the hero position on the homepage, the strongest internal link weight, the most city crossings, the deepest content, and the first slot in the navigation.

Customer mix and money

- Roughly 90 percent residential, 10 percent commercial, actively expanding commercial.
- Estimates are free. No trip fee, no diagnostic fee.
- Payment: major credit and debit cards, checks, ACH bank transfer, automatic monthly payments for recurring clients. **No financing**. Do not build a financing module or mention monthly payment plans for projects.
- Annual Property Maintenance Agreements: residential from \$145 per month, commercial custom priced. Scope is customized by property size, frequency and services included.
- Travel radius: about 45 minutes from Denham Springs. Work beyond the normal area may carry a mobilization fee based on distance, project size and scope.
- Promotions: seasonal offers and new customer specials that vary through the year. Build a single reusable promotion banner component with an on and off switch, never a hard coded offer.

Warranty, published verbatim

ProGround Land Management stands behind the quality of our workmanship. If an issue arises that is directly related to our installation or workmanship, we will evaluate it and work to make it right. Any project specific workmanship warranties or manufacturer warranties will be clearly outlined in the customer's proposal or service agreement. Warranty coverage does not include damage caused by weather, improper watering or maintenance, pests, disease, third parties, or conditions outside of our control.

Materials and equipment

NDS drainage products, ADS drainage pipe, commercial grade landscape materials, professional lawn and landscape equipment. These may be named as products installed. **No certification claim of any kind may be attached to them.**

The ideal customer

An established homeowner or property owner who values quality, reliability and professional communication over the lowest price. Middle to upper income, established property, willing to invest in keeping it attractive and functional. Busy professionals, families and retirees who would rather not

manage multiple contractors. On the commercial side: business owners, property managers, HOA boards and facility managers who need consistent appearance and dependable scheduling.

Design consequence. This audience reads before it calls. They respond to evidence, order and calm confidence, not to urgency banners, countdown timers, discount stickers or exclamation points. Build a site that looks more expensive than the competition, because Andrew is not competing on price.

| The objection, and how the site answers it

The single most common hesitation is **price**. Recurring maintenance prospects compare ProGround to cheaper lawn providers and hesitate at committing to an annual agreement. Project prospects compare the proposal to a lower bid. Andrew's stated position: not the cheapest, and not trying to be. The website has to do the reframing work before the estimate ever happens. Four mechanisms, all specified later in this manual:

1. Publish real starting prices on every service page. Price transparency filters out bargain hunters before they cost Andrew a drive.
2. Show the process. A written estimate, a defined scope, organized scheduling, digital approvals and follow up are the product, and they justify the number.
3. Show the outcome. Before and after evidence is the only thing that makes a \$2,500 bed renovation feel cheap.
4. Ask for budget range on project forms, optional and never required, so Andrew can triage a \$300 patch job from a \$7,500 improvement without driving out.

Positioning, messaging and voice

The three words

Andrew's brief: **Professional. Trustworthy. Premium.** Every design and copy decision gets tested against those three. A stock photo of a smiling family fails all three. A wide, calm photograph of a finished bed line at golden hour passes all three.

The positioning statement

Internal, not for publication

For established property owners across Greater Baton Rouge who are tired of chasing contractors, ProGround Land Management is the one company that both maintains a property and improves it, under written scopes, scheduled service and predictable billing. Unlike the cheapest mowing outfit or the one man landscaper who does not answer the phone, ProGround runs a professional process from quote to completion.

The three differentiators, in Andrew's words

These three are the spine of the homepage, they repeat on every service page, and they are the answer to every objection. Never rewrite them into generic quality and service language.

Simple and predictable

Recurring maintenance agreements, scheduled service, automatic billing and clear scopes of work instead of constantly calling to schedule the next visit.

Maintain it and improve it

Routine maintenance plus renovations, drainage, grading, installation and seasonal work. One company instead of several contractors.

A professional process

Written estimates, defined scopes, organized scheduling, digital approvals and professional follow up. You know what is being done, what it costs and what happens next.

Voice rules

WRITE LIKE THIS	NEVER LIKE THIS
Standing water in your backyard after every rain is a grading problem, not a grass problem.	We are passionate about transforming outdoor living spaces!
Landscape renovations start at \$750. Most full front bed renovations in Baton Rouge land between \$2,500 and \$6,000 depending on bed size, plant material and access.	Contact us today for a free quote on our affordable services!
You get a written estimate with a defined scope. You approve it digitally. We schedule it and tell you when we are coming.	Quality workmanship and exceptional customer service you can trust.

We are not the cheapest. We plan the job properly, use quality materials and build something that lasts.

Unbeatable prices! Best value in Baton Rouge!

- Second person. Talk to the property owner about their property.
- Short declarative sentences. No stacked adjectives.
- Numbers wherever a number is true: 100+ homes served, 5+ years, from \$145 per month, same day response, 45 minute radius.
- No exclamation points anywhere on the site. Not one.
- Andrew speaks in first person on the About page and in his own quote blocks. Everywhere else the voice is the company: we.
- Never use the phrase quality and service as a selling point. It was explicitly ruled out.

Banned claims

Licensed. Certified. Insured (not stated by Andrew, do not assume). BBB accredited. Award winning. Family owned. Veteran owned. Woman owned. Second generation. Decades of experience. Number one in Baton Rouge. Free with any service. Financing available. Any employee count above owner operated with crew help. Any project count other than 100+ homes served.

Ask Andrew once, before launch

Insurance status is missing from the intake and it is one of the top three trust signals a property owner looks for. If ProGround carries general liability, get the carrier and coverage confirmation in writing and add a trust line. If not, leave the subject off the site entirely. Do not guess.

Keyword map

Seventy eight targets, five buckets, each mapped to exactly one owning page. Priority 1 is built first because it is winnable inside two months. The head terms are built last, after authority accumulates.

Priority logic

P1 service crossed with city, and problem language. Lowest competition, highest buyer intent, fastest to rank for a domain registered in 2025. **P2** single city terms, audience terms, and cost questions. **P3** the head terms, which need links and reviews before they move. Volume and competition columns are informed estimates, not pulled data. Re run them live against the actual results pages before the final build and adjust priority where reality disagrees.

Where ProGround wins first

Drainage and grading crossed with a city are the fastest wins on this list. They are urgent, expensive, poorly served by mow and blow companies, and almost nobody in this market has written a serious page about clay soil water movement. Landscape renovation crossed with a city is the second wave, and it is the revenue Andrew actually asked for. The bare head terms, landscaper baton rouge and landscaping company baton rouge, come last and take months.

Site architecture

Sixty indexable pages, built in two phases so that no page ships thin. Phase 1 is the launch set of 36. Phase 2 adds 24 over the following six weeks. Every URL below is final. Directory style, lowercase, trailing slash, no file extensions, no dates, no numbers.

Page inventory

PAGE TYPE	COUNT	PHASE	MIN WORDS	NOTES
Homepage	1	1	1,100	Renovation led. All three differentiators. Full proof stack.
Core service pages	9	1	900 to 1,400	One per money service. Own price block, process, FAQs.
City pages	6	1	900 to 1,400	Baton Rouge, Denham Springs, Prairieville, Walker, Central, Shenandoah.
Parish pages	3	2	900 to 1,200	Livingston, East Baton Rouge, Ascension.
Neighborhood pages	4	2	700 to 1,000	Only for the four Andrew's callers actually name.
Service areas hub	1	1	700	Interactive map, links every location page.
Audience pages	7	2	800 to 1,100	The commercial expansion engine.
Service crossed with city	13	1 and 2	800 to 1,200	The money pages. Six ship in phase 1.
Resource articles	8	1 and 2	1,200 to 1,800	Three ship in phase 1, then one every two weeks.
About Andrew	1	1	800	The trust anchor. Face photo required.
How we work	1	1	700	The process page. Answers the price objection directly.
Pricing	1	1	900	Every starting price in one place. Rare in this trade.
Project gallery	1	1	500	Before and after library, filterable.
Reviews	1	1	500	All ten real reviews, verbatim.
FAQ hub	1	1	1,200	Andrew's ten answers plus every page level FAQ.
Request an estimate	1	1	400	The full conditional form. Primary conversion target.
Contact	1	1	400	Phone, text, email, coverage map, hours.
Privacy and Terms	2	1	600	Site completeness signal.

Link structure, hub and spoke

- **Homepage** links to all nine service pages, the service areas hub, the who we serve hub, about, pricing, gallery, reviews and the estimate form.
- **Every service page** links to its own city money pages, two sibling services, the relevant resource article, pricing and the estimate form.
- **Every city page** links to the five services most in demand in that city, two neighboring city pages, one money page for that city, and the service areas hub.
- **Every money page** links up to its parent service page and up to its parent city page. Never orphaned, never a dead end.
- **Every resource article** links to two money pages and one service page, with descriptive anchors.
- **Footer** carries services, top six locations, about, pricing, reviews, FAQ, contact, legal, sitewide.
- Every page must be reachable within three clicks of the homepage. No orphans. Anchor text is always descriptive, never click here, and varied naturally so the same phrase is not repeated site wide.

Phase 1 launch set, 36 pages

Homepage, nine service pages, six city pages, the service areas hub, six money pages (renovation Baton Rouge, drainage contractor Baton Rouge, yard grading Baton Rouge, landscape renovation Denham Springs, drainage solutions Denham Springs, landscape renovation Prairieville), three resource articles (why your yard holds water, landscape renovation cost, French drain comparison), about, how we work, pricing, gallery, reviews, FAQ, request an estimate, contact, privacy, terms. That set alone clears the 30 page threshold with no thin pages in it.

Page briefs: homepage and services

Each brief gives the URL, the H1, the title tag, the meta description, the section order and the required internal links. Body copy is written to these skeletons and never reused between pages.

H1 Landscape renovations, drainage and property maintenance in Greater Baton Rouge

TITLE Landscaping & Drainage in Baton Rouge | ProGround

META Landscape renovations, drainage fixes and year round property maintenance across Baton Rouge, Denham Springs and Prairieville. Free estimates, same day response.

WORDS 1,100 minimum

Section order, top to bottom

1. **Hero.** Full bleed before and after of a real renovation, with the slider handle already visible so a visitor knows it moves. H1 over a dark scrim. One line of support copy: a written scope, a scheduled date and a finished property. Two buttons: *Request an estimate* as primary, *Call (225) 324-8252* as secondary. Under them, one quiet line: Free estimates. Same day response. Serving Baton Rouge, Denham Springs, Prairieville and surrounding parishes.
2. **Trust bar.** Four items on one line, no icons larger than the text: 100+ homes served / Locally owned in Denham Springs / 5.0 on Google / Same day response.
3. **The problem framing.** Three short columns naming what visitors actually type. Overgrown, dated beds. Water that will not drain. Nobody who shows up when they say they will. Each column links to the service that solves it. This is where the page earns the click instead of shouting.
4. **Flagship block: landscape renovation.** Half page. Large before and after pair, three bullets on what a renovation includes, the starting price, and a link to the full page. This block gets the most visual weight on the site because it is the work Andrew wants more of.
5. **Services grid.** Nine cards, each with a real photo, the service name, one line of plain description, and the starting price. Cards link to the service pages.
6. **The three reasons.** Andrew's own differentiators, one panel each, written out in full. Simple and predictable. Maintain it and improve it. A professional process.
7. **How we work.** Five numbered steps in a horizontal timeline: you send photos and describe the problem, we look at the property, you get a written estimate with a defined scope, you approve it digitally, we schedule it and follow up when it is done. Links to /how-we-work/.
8. **Proof.** Three of the strongest reviews, verbatim, with real first and last names as they appear on Google, plus the gallery link. Prioritize Aimee Lemann for the same day quote and after care detail, Connie Schiller for pricing in line with competitors, Bridgette Homer for the automated property management line.
9. **Coverage.** The interactive service area map. Cities listed as text links underneath so crawlers can follow them.

10. **Maintenance plan teaser.** From \$145 per month, what is included, one link to the plan page. Framed as the alternative to calling someone every time the grass grows.
11. **Meet Andrew.** A photograph of Andrew, two sentences in his own voice, link to /about/. Owner operated is a selling point to this audience, not a weakness.
12. **Final conversion block.** The short form itself, embedded, not a link. Name, phone, property address, service needed, describe the problem, photo upload. Phone and text options beside it.

The one rule for the homepage

A visitor must understand within five seconds that this company renovates landscapes and fixes water problems in Baton Rouge, and must be able to act without scrolling. Everything after the hero exists to remove doubt, not to introduce the business.

Core service page template

Every service page follows this structure. Nothing is skipped, nothing is reordered.

1. H1 naming the service. One sentence on what it is and who it is for.
2. Hero image of that exact service, real work only.
3. The problem this solves, in customer language, pulled from the phrases in Section 02.
4. What is included, as a specific list. Not benefits. Actual scope items.
5. Our process for this service, numbered, four to six steps.
6. Price block: the real starting price, what moves the number up or down, and the mandatory pricing footnote.
7. Before and after evidence, at least two pairs per service once assets arrive.
8. Where we do this work: text links to the six city pages and the relevant money pages.
9. Five to seven FAQs with schema markup that matches the visible text exactly.
10. Related services: two cards.
11. Conversion block with the form.

The nine service pages

URL </landscape-renovations/> **Flagship. Build this one first and best.**

H1 Landscape renovations in Greater Baton Rouge

TITLE Landscape Renovations Baton Rouge | ProGround

META Overgrown or dated beds rebuilt with new plants, mulch, edging and a better layout.

Renovations from \$750. Free estimate, written scope, same day response.

UNIQUE CONTENT A real renovation walked through end to end: demolition and removal of tired plant material, soil and bed prep, edging and bed line reshaping, plant selection for South Louisiana heat and clay, mulch or pine straw finish, after care instructions. A section on why bed lines matter more than plant count for how a house reads from the street. A section on what makes a renovation cost \$1,500 versus \$6,000: bed square footage, plant size at install, removal volume, access for equipment, irrigation present or not.

FAQS How much does a landscape renovation cost. Do you remove the old plants. How long does a renovation take. Do you provide a design first. What plants hold up in Baton Rouge summers. Do you offer after care instructions. Can you renovate just the front. Do you maintain what you install.

LINKS OUT </landscape-renovation-baton-rouge/>, </landscape-renovation-denham-springs/>, </landscape-renovation-prairieville/>, </landscape-renovation-central/>, </resources/landscape-renovation-cost-baton-rouge/>, </gallery/>, </annual-property-maintenance/>

URL </landscape-installation/>

H1 Landscape installation for new and existing properties

TITLE Landscape Installation Baton Rouge | ProGround

META Plants, shrubs, mulch, rock and edging installed for new builds and existing homes across Greater Baton Rouge. From \$750 with a written scope.

UNIQUE CONTENT The distinction from renovation stated plainly, since callers use the words interchangeably: installation is building landscape where there is none or where the builder left bare dirt, renovation is rebuilding what already exists. Builder grade landscaping and why it fails in year two. Plant spacing for mature size rather than for the day of install. Bed preparation on new construction lots where the topsoil was scraped.

FAQS What is the difference between installation and renovation. Do you work with new construction. Do you plant sod. Who chooses the plants. Do you install irrigation. When is the best time of year to plant in Louisiana.

LINKS OUT </landscape-installation-baton-rouge/>, </who-we-serve/new-construction/>, </landscape-renovations/>, </mulch-pine-straw-rock/>

URL </drainage-solutions/> **The fastest ranking opportunity on the site.**

H1 Yard drainage solutions for standing water

TITLE Yard Drainage Contractor Baton Rouge | ProGround

META Standing water in your yard after every rain. Catch basins, drainage pipe and grading built for South Louisiana clay. Drainage projects from \$1,000.

UNIQUE CONTENT This page should be the best drainage page in the market, and that is achievable because the competition is thin. Explain water movement in heavy clay soil, why water sits instead of percolating, and why adding topsoil to a low spot is not a fix. Break the solutions apart: surface catch basins and grated inlets, solid and perforated pipe runs, downspout tie ins, swales, regrading. Name NDS and ADS as the products installed, with no certification claim attached. Include a section on gutters and downspouts as a hidden cause. Include a discovery section listing the six questions Andrew asks on the phone, since a visitor who reads them arrives at the estimate prepared.

FAQS How much does yard drainage cost. Do I need a French drain or grading. How long does the work take. Will you damage my lawn. Do you get permits. Does drainage work fix a wet crawl space. How deep does drainage pipe go. What happens to the water once it is collected.

LINKS OUT </drainage-contractor-baton-rouge/>, </drainage-solutions-denham-springs/>, </drainage-contractor-livingston-parish/>, </grading-yard-leveling/>, </resources/why-your-yard-holds-water/>, </resources/french-drain-vs-catch-basin-vs-grading/>

URL </grading-yard-leveling/>

H1 Grading and yard leveling

TITLE Yard Grading & Leveling Baton Rouge | ProGround

META Low spots, uneven ground and water running the wrong way, corrected by reshaping the property. Grading projects from \$750 with free estimates.

UNIQUE CONTENT Slope and fall explained without jargon, including why water needs to move away from the foundation and where it has to go instead. The difference between cosmetic leveling and corrective grading. Signs a yard needs grading rather than a drain: water that sits in sheets rather than in one spot, soggy ground days after rain, mulch washing out of beds, mower scalping on high spots. What the work looks like on the ground and what recovery of the turf looks like afterward.

FAQS How do I know if I need grading or drainage. Will my grass survive. How much soil gets moved. Can you fix water running toward my slab. How long before the yard looks normal. Do you sod afterward.

LINKS OUT </yard-grading-baton-rouge/>, </drainage-solutions/>, </resources/why-your-yard-holds-water/>

URL </annual-property-maintenance/>

H1 Annual property maintenance agreements

TITLE Property Maintenance Plans from \$145/mo | ProGround

META Scheduled mowing, bed care, trimming and seasonal work on one predictable monthly bill. Residential plans from \$145 a month across Greater Baton Rouge.

UNIQUE CONTENT This is the recurring revenue page and it fights the price objection hardest. Lead with what the agreement removes: calling to schedule, chasing invoices, wondering if anyone is coming. List every service that can sit inside a plan, taken from Andrew's list: mowing, edging, trimming, blowing, hedge and shrub trimming, bed maintenance, hard surface weed control, seasonal cleanups, mulch or pine straw refreshes. Explain that plans are customized by property size, frequency and scope. Include the plan builder tool from Section 09. State honestly that this starts at \$145 a month and that a small lot and a two acre lot are not the same number.

FAQS What is included in a maintenance agreement. How much does it cost. Is there a contract length. Do I have to be home. How do I pay. Can I add mulch refreshes. What happens if it rains on my service day. Do you handle large properties.

LINKS OUT </property-maintenance-prairieville/>, </commercial-property-maintenance/>, </landscape-bed-cleanup/>, </pricing/>, </how-we-work/>

URL </commercial-property-maintenance/>

H1 Commercial grounds maintenance

TITLE Commercial Grounds Maintenance Baton Rouge | ProGround

META Dependable mowing and grounds care for offices, retail, storage facilities and managed properties. Custom priced annual agreements with one point of contact.

UNIQUE CONTENT Written for a decision maker, not a homeowner. What consistent appearance means to a tenant, a customer walking in, or an HOA board. Scheduling reliability, defined scopes, single invoice, one contact who answers. Property types served: offices, retail, storage facilities, industrial yards, HOA common areas, managed residential. Note that commercial is currently 10 percent of the business and actively expanding, framed as capacity available now rather than inexperience.

FAQS How is commercial priced. What property types do you service. Can you work outside business hours. Do you carry a written scope of work. Who do we call with an issue. Do you bid annual contracts.

LINKS OUT </commercial-lawn-maintenance-baton-rouge/>, </commercial-grounds-maintenance-denham-springs/>, all seven </who-we-serve/> pages, </resources/commercial-maintenance-contract-guide/>

URL </mulch-pine-straw-rock/>

H1 Mulch, pine straw and decorative rock installation

TITLE Mulch, Pine Straw & Rock Installation | ProGround

META Fresh mulch from \$350, pine straw refreshes and decorative rock installed with proper bed prep and clean edges. Serving Greater Baton Rouge.

UNIQUE CONTENT A genuine comparison table across cost, lifespan in South Louisiana humidity, appearance, weed suppression, washout behavior on slopes, and best use. Bed preparation as the step that separates a \$350 refresh that looks good for a year from a cheap dump and go. Depth and coverage explained. Rock for drainage areas and low maintenance strips.

FAQS How often should mulch be replaced. Which lasts longer, mulch or pine straw. Do you remove the old material. How much do I need. Does rock hurt my plants. Will mulch wash out on a slope.

LINKS OUT </resources/mulch-vs-pine-straw-vs-rock/>, </landscape-bed-cleanup/>, </landscape-renovations/>

URL </landscape-bed-cleanup/>

H1 Landscape bed cleanup and restoration

TITLE Flower Bed Cleanup Baton Rouge | From \$350 | ProGround

META Overgrown beds cleared of weeds, debris and dead material, then edged and finished. Cleanups from \$350 with same day estimates.

UNIQUE CONTENT The lowest commitment entry point on the site, and the natural first job that becomes a renovation. Scope stated exactly: weed removal, debris and dead material removal, pruning back overgrowth, edge redefinition, optional mulch finish. Position honestly as the right call when the bones are good and the wrong call when the beds need to be rebuilt, with a link to renovations for the second case. That honesty is a conversion tool with this audience.

FAQS How much does a bed cleanup cost. Is mulch included. How long does it take. Will the weeds come back. Should I clean up or renovate. Do you haul the debris away.

LINKS OUT </landscape-renovations/>, </annual-property-maintenance/>, </mulch-pine-straw-rock/>

URL </christmas-light-installation/>

H1 Christmas light installation and removal

TITLE Christmas Light Installation Baton Rouge | ProGround

META Professional holiday lighting installed, maintained and taken down. Rooflines, trees, columns and walkways from \$300. Booking opens in the fall.

UNIQUE CONTENT Seasonal page, live year round, promoted from September. Scope: design, install, maintain through the season, remove and store or remove only. Areas covered: rooflines, trees and shrubs, columns, walkways. The three questions Andrew asks: which areas, which style, is there accessible exterior power. Include the lighting configurator from Section 09. Build in an off season state that invites early booking instead of hiding the page.

FAQS How much does Christmas light installation cost. Do you supply the lights. Do you take them down. When should I book. Do you service two story homes. What if a bulb goes out.

LINKS OUT </christmas-light-installation-baton-rouge/>, </annual-property-maintenance/>

Location pages and the local fact bank

Location pages are where most local sites collapse into thin content and where this one wins. Every page below has its own angle, its own facts, its own FAQs and its own photographs. A city page that could have its name swapped for another city is a failure and must not ship.

Verification rule

The fact bank below is written from general regional knowledge and is close enough to build from, but every number, boundary, road name and date must be confirmed against a live source before it is published. Population figures, rainfall averages and flood history in particular. If a fact cannot be verified, cut it. A wrong local fact is worse than a missing one, because this audience lives here and will notice.

Regional fact bank, the raw material

THEME	WHAT TO USE IT FOR
Heavy clay soil	The single most useful technical fact on the site. Gulf Coast clay soils drain slowly, so water sits on the surface instead of soaking in. This explains standing water, mulch washout, root rot in poorly chosen plants, and why adding a few inches of topsoil to a low spot never fixes it. Use it on drainage, grading and renovation pages, framed differently each time.
Rainfall volume	Greater Baton Rouge receives roughly 60 inches of rain a year, well above the national average, delivered in intense summer downpours rather than steady drizzle. Verify the current figure. This is why drainage is a real trade here and not an upsell.
The 2016 flood	The August 2016 flood hit Livingston Parish, Denham Springs and Central hardest. It reshaped how property owners in those areas think about water. Handle this with care and respect. It is context for why drainage matters locally, never a sales hook or a fear tactic.
Growing season	A long subtropical growing season means turf and shrubs grow most of the year, which is the honest argument for a recurring plan over one off visits. Occasional hard freezes damage tender landscape material and drive renovation demand in late winter.
Turf type	St. Augustine dominates residential lawns in this market, with centipede common. It is shade tolerant and dense but suffers in standing water and in compacted clay. Ties turf failure directly to drainage work.
Hurricane season	June through November brings storm debris, downed limbs and washed out beds. Supports seasonal cleanup demand and the case for a maintenance agreement.
Mature oak canopy	Established south Baton Rouge neighborhoods are shaded by large live oaks. Shade, surface roots and leaf drop drive plant selection, bed design and pine straw preference. A strong, specific angle for neighborhood pages.

City page template

1. H1 in the form *Landscaping and property maintenance in [City], LA*.
2. Intro of 60 to 90 words naming real local context. Not a generic welcome.

3. **Why properties here need this work.** The section that makes the page unique. Tied to that city's actual conditions, housing stock age and growth pattern.
4. Services most requested in this city, linking to the service pages, ordered by what that area actually buys.
5. Neighborhoods and roads served, as plain text, drawn only from Andrew's list.
6. Local proof: a review from that area if one exists, otherwise the kinds of properties served there. Never attach a real review to a city the reviewer did not name.
7. Five to eight city specific FAQs with schema.
8. Response and coverage note: drive time from Denham Springs, same day response, free estimates.
9. Conversion block, plus links to two neighboring city pages and the money page for that city.

The six city pages

URL </landscaping-baton-rouge/> **Primary local page. Highest priority after the homepage.**

H1 Landscaping and property maintenance in Baton Rouge, LA

TITLE Landscaping Baton Rouge, LA | ProGround

META Landscape renovations, drainage and recurring property maintenance across Baton Rouge, from Highland Road to Bluebonnet. Free estimates and same day response.

THE ANGLE Established neighborhoods with mature landscaping that has outgrown its original design. Baton Rouge is Andrew's top revenue city and the deepest pool of renovation work: houses built decades ago whose beds were planted for a much smaller shrub. Cover the oak canopy and what grows under it, aging bed lines, and the drainage patterns of an older built out area where runoff has nowhere new to go.

NAMED AREAS Bocage, Old Goodwood, Goodwood, Highland Road, Southdowns, Kenilworth, Jefferson Terrace, Westminster, Woodgate, Oak Hills, Santa Maria, University Club Plantation, Country Club of Louisiana, Bluebonnet Highlands, Highland Creek, The Settlement at Willow Grove, and the Perkins Road and Bluebonnet Boulevard corridors.

FAQ TOPICS Do you service my part of Baton Rouge. How fast can you look at my property. Do you work in gated communities. What does a front bed renovation cost here. Can you fix standing water in an older subdivision. Do you offer monthly maintenance in Baton Rouge. Do you handle HOA and commercial properties.

LINKS OUT </landscape-renovation-baton-rouge/>, </drainage-contractor-baton-rouge/>, </yard-grading-baton-rouge/>, </commercial-lawn-maintenance-baton-rouge/>, </landscaping-central/>, </landscaping-prairieville/>, all four neighborhood pages

URL </landscaping-denham-springs/>

H1 Landscaping and property maintenance in Denham Springs, LA

TITLE Landscaping Denham Springs, LA | ProGround

META ProGround is based in Denham Springs. Landscape renovations, drainage work and property maintenance for Livingston Parish, with free estimates.

THE ANGLE This is home. Lead with it: the owner lives and works here, and a Denham Springs property is a short drive rather than a scheduling problem. Cover rebuilt and newer housing stock, lots where landscaping was put in fast during rebuilding and is now due for a proper design, and water management on flat ground near the Amite River basin. Handle flood history factually and respectfully.

FAQ TOPICS Are you local to Denham Springs. How quickly can you get out here. Do you work in Livingston Parish outside the city. Do you fix yards that hold water. Do you offer monthly maintenance here. What does a bed renovation run in this area.

LINKS OUT </landscape-renovation-denham-springs/>, </drainage-solutions-denham-springs/>, </commercial-grounds-maintenance-denham-springs/>, </landscaping-walker/>, </landscaping-livingston-parish/>

URL </landscaping-prairieville/>

H1 Landscaping and property maintenance in Prairieville, LA

TITLE Landscaping Prairieville, LA | ProGround

META New construction landscape installation, drainage and monthly property maintenance across Prairieville and Ascension Parish. Free estimates.

THE ANGLE Growth and new construction. Prairieville is one of the fastest growing communities in the region, which means a very different job mix: builder grade landscaping that needs upgrading, bare lots that need a first real install, and new subdivisions on ground that was recently pasture or farmland and drains poorly until it is shaped. This page leans installation and drainage rather than renovation.

FAQ TOPICS Do you install landscaping on new construction. My builder left bare dirt, where do I start. Why does my new yard hold water. Do you service Ascension Parish. Do you offer monthly maintenance in Prairieville. How soon can you start.

LINKS OUT </landscape-renovation-prairieville/>, </property-maintenance-prairieville/>, </who-we-serve/new-construction/>, </landscaping-ascension-parish/>, </landscaping-baton-rouge/>

URL </landscaping-walker/>

H1 Landscaping and property maintenance in Walker, LA

TITLE Landscaping Walker, LA | ProGround

META Lawn and property maintenance, landscape installation and drainage work in Walker and surrounding Livingston Parish. Locally based, free estimates.

THE ANGLE A short drive from base, with a mix of subdivision lots and larger properties on the edge of town. Lean into larger lot mowing, acreage upkeep and maintenance agreements for owners with more ground than a push mower can handle. Note the drive time honestly.

FAQ TOPICS Do you service Walker. Do you mow larger lots and fields. What does monthly maintenance cost here. Can you handle an acre or more. Do you do drainage work in Walker.

LINKS OUT </who-we-serve/acreage-and-large-lots/>, </annual-property-maintenance/>, </landscaping-denham-springs/>, </landscaping-livingston-parish/>

URL </landscaping-central/>

H1 Landscaping and property maintenance in Central, LA

TITLE Landscaping Central, LA | ProGround

META Landscape renovations, grading and property maintenance in Central, Louisiana. Larger lots and drainage work handled with a written scope and free estimate.

THE ANGLE Bigger lots, more open ground, more grading and large property mowing. Central sits between two river systems and much of it is flat, so water movement across a large yard is a live issue rather than a nuisance. This page leans grading, drainage and large property maintenance.

FAQ TOPICS Do you service Central. Can you grade a large yard. Do you mow acreage. Do you offer maintenance agreements here. How is a large property priced.

LINKS OUT </landscape-renovation-central/>, </grading-yard-leveling/>, </who-we-serve/acreage-and-large-lots/>, </landscaping-east-baton-rouge-parish/>

URL </landscaping-shenandoah/>

H1 Landscaping and property maintenance in Shenandoah, Baton Rouge

TITLE Landscaping Shenandoah, Baton Rouge | ProGround

META Bed renovations, mulch, drainage and recurring maintenance for Shenandoah area homes in east Baton Rouge. Free estimates, same day response.

THE ANGLE Andrew's callers name Shenandoah by itself, which is a strong signal. This is an established east Baton Rouge area of family subdivisions whose original landscaping is now decades old: oversized foundation shrubs, tired bed lines, thin turf under grown out trees. It is a renovation and bed cleanup market above all. Keep the page tightly local and shorter than the Baton Rouge page rather than padding it.

FAQ TOPICS Do you service Shenandoah. What does a bed renovation cost around here. Do you offer weekly or biweekly maintenance. Can you replace overgrown foundation shrubs. Do you handle drainage in older subdivisions.

LINKS OUT </landscape-bed-cleanup/>, </landscape-renovations/>, </landscaping-baton-rouge/>, </landscaping-east-baton-rouge-parish/>

The three parish pages

Parish pages are coverage pages, not city clones. Each one explains the parish as a whole, links to every city inside it that ProGround serves, and owns a search behavior that city pages cannot: people searching by parish are usually property managers, HOA boards, agents and owners of multiple properties. Write them to that reader.

PAGE	OWNS	DISTINCT CONTENT
/landscaping-livingston-parish/	Denham Springs, Walker, and the surrounding parish	Home parish. Base of operations, fastest response, growth of the parish, larger lots outside the city limits, drainage on flat ground.
/landscaping-east-baton-rouge-parish/	Baton Rouge, Central, Shenandoah	The widest range of property types in the service area, from older established neighborhoods to commercial corridors. Leans commercial and multi property.
/landscaping-ascension-parish/	Prairieville and the northern parish	Growth, new construction, new subdivisions on former open ground, first install work rather than renovation.

The four neighborhood pages

Build these only because Andrew's customers say these names out loud on the phone. Four is the limit. Each needs a genuinely different reason to exist, and each must stay honest: describe the kind of property and the kind of work, never claim a client list or a job in a community without written permission from that customer.

PAGE	ANGLE AND REQUIRED UNIQUE CONTENT
/service-areas/university-club-plantation/	Golf community standards. Consistency of appearance, scheduled service, quiet professional crews, gate and access coordination. Andrew's caller phrase is literally <i>I need weekly lawn maintenance in University Club</i> , so the maintenance agreement is the lead offer here.
/service-areas/country-club-of-louisiana/	Gated community access and scheduling, high expectation properties, coordination with community standards, discreet crews. Lead offer is the annual agreement plus renovation.
/service-areas/bocage-old-goodwood/	Established Baton Rouge neighborhoods under heavy oak canopy. Shade planting, surface roots, leaf load, pine straw over mulch, restoring bed lines on older homes. Lead offer is renovation.
/service-areas/highland-road-corridor/	The corridor as a whole, covering the neighborhoods along it. Larger lots, mature trees, drainage on properties where water has to cross a long yard. Lead offer is renovation plus drainage.

Service areas hub

URL </service-areas/>

H1 Where ProGround works

TITLE Service Areas | Baton Rouge to Livingston Parish | ProGround

META ProGround serves Baton Rouge, Denham Springs, Prairieville, Walker, Central, Shenandoah and the surrounding parishes. Check coverage for your address.

CONTENT The interactive coverage map from Section 09, a plain text list of every city, parish and neighborhood page as crawlable links, the honest 45 minute radius statement, and the mobilization fee note for work beyond it. This page is a crawl hub, so keep the link list flat and visible, never hidden behind a tab or an accordion.

Audience, money, resource and utility pages

Who we serve: the commercial expansion engine

Commercial is 10 percent of revenue today and Andrew wants it larger. These seven pages exist to be found by the person who signs a contract, not by a homeowner. Each carries its own vocabulary, its own objections and its own proof requirements. Hub page at [/who-we-serve/](#) introduces all seven and links to [/commercial-property-maintenance/](#).

PAGE	READER AND THEIR REAL PROBLEM	WHAT THE PAGE MUST CONTAIN
/who-we-serve/hoa-common-areas/	An HOA board member or manager whose entrances, medians and common areas look inconsistent and who takes complaints personally.	Scope of work language a board can approve, seasonal color and entrance presentation, consistent scheduling, one contact, annual budget predictability, how to request a bid.
/who-we-serve/property-managers/	A manager running several properties who is tired of chasing vendors and reconciling invoices.	Multiple property scheduling, single monthly invoice, defined scopes per property, written communication, response expectations, ease of adding a property.
/who-we-serve/office-and-retail/	An owner or operator whose customers judge the business by the parking lot island.	Curb appeal as a business asset, service outside business hours, entrance and walkway presentation, hard surface weed control, seasonal cleanups.
/who-we-serve/storage-and-industrial/	A storage or industrial facility operator with fence lines, gravel edges and large open areas nobody wants to maintain.	Fence line and perimeter control, large area mowing, gravel and hard surface weed treatment, access and gate coordination, safety and scheduling.
/who-we-serve/new-construction/	A homeowner staring at a graded dirt lot, or a builder who needs a lot finished.	What builder grade landscaping leaves out, bed preparation on scraped lots, plant spacing for mature size, first year watering guidance, drainage on new subdivisions.
/who-we-serve/realtors-and-listings/	An agent or seller who needs curb appeal before photos, on a deadline.	Fast turnaround cleanup and mulch packages, what changes a listing photo most, honest timing, coordination with a photography date.
/who-we-serve/acreage-and-large-lots/	An owner with more ground than a homeowner mower can handle.	Large property mowing, field and lot clearing of overgrowth, how acreage is priced, frequency options, access requirements.

Money pages: service crossed with city

These are the highest intent pages on the site and the ones most likely to be built lazily. The rule: a money page is not a service page with a city name inserted. It is a page about doing that specific service in that specific place, written from the local conditions up.

Required structure for every money page

1. H1 in the form *[Service] in [City], LA*. Title tag on the same pattern, under 60 characters.
2. An opening that names something real about doing this work in this place. Soil, housing age, growth pattern, drive time, drainage behavior.
3. The local demand argument: why this specific service comes up in this specific city.
4. Scope and process, written shorter than the parent service page and pointed at the local case.
5. Starting price plus the local cost drivers, then the mandatory pricing footnote.
6. At least three FAQs that combine the service and the city and appear on no other page.
7. Links up to the parent service page and the parent city page, sideways to one sibling money page.
8. The conversion block with the city preselected in the form.

MONEY PAGE	PHASE	LOCAL ANGLE THAT MAKES IT UNIQUE
/landscape-renovation-baton-rouge/	1	Decades old plantings outgrown for their beds, shade under mature oaks, restoring bed lines on established homes.
/drainage-contractor-baton-rouge/	1	Built out older neighborhoods where runoff has nowhere new to go and clay soil holds it on the surface.
/yard-grading-baton-rouge/	1	Flat lots, water moving toward slabs, low spots that stay wet days after a storm.
/landscape-renovation-denham-springs/	1	Landscaping installed quickly during rebuilding that is now ready for a proper design.
/drainage-solutions-denham-springs/	1	Flat ground near the river basin, high water table behavior, local company with the shortest drive.
/landscape-renovation-prairieville/	1	Upgrading builder grade landscaping in newer subdivisions to something that will still look right in five years.
/landscape-installation-baton-rouge/	2	Full installs on properties where the previous landscape was removed entirely.
/commercial-lawn-maintenance-baton-rouge/	2	Office, retail and storage corridors, service windows outside business hours.
/commercial-grounds-maintenance-denham-springs/	2	Local businesses served by a local owner, short response distance.
/drainage-contractor-livingston-parish/	2	Parish wide drainage coverage, larger lots outside city limits.

/property-maintenance-prairieville/	2	Growing subdivisions, busy households, predictable monthly billing.
/landscape-renovation-central/	2	Larger lots where a renovation covers more ground and access for equipment is easier.
/christmas-light-installation-baton-rouge/	2	Seasonal page, launched in September, targeting the fall booking window.

Resource articles

These earn the long tail, feed answer engines, and give every sales conversation something to send. Each is 1,200 to 1,800 words, genuinely useful, written to actually answer the question rather than to tease an estimate. Each carries article schema, two links to money pages and one clear closing call to action.

ARTICLE	PHASE	MUST DELIVER
Why your Baton Rouge yard holds water after every rain /resources/why-your-yard-holds-water/	1	The five real causes, how to tell them apart by observation, what each fix costs, and what to stop trying. The best link magnet on the list.
What a landscape renovation costs in Baton Rouge /resources/landscape-renovation-cost-baton-rouge/	1	Honest ranges by project size, the six things that move the number, a worked example at three budget levels, and why the cheapest bid usually costs more.
French drain, catch basin or regrading /resources/french-drain-vs-catch-basin-vs-grading/	1	A decision table by symptom, what each solution actually does in clay soil, cost ranges and failure modes.
What yard drainage costs in South Louisiana /resources/yard-drainage-cost-south-louisiana/	2	Cost by linear foot and by system type, what drives the number, why an estimate needs a site visit.
Mulch, pine straw or rock /resources/mulch-vs-pine-straw-vs-rock/	2	Full comparison across cost, lifespan, appearance, washout, weed suppression and best use in this climate.
The Louisiana landscape calendar /resources/louisiana-landscape-calendar/	2	Month by month property tasks. Pairs with the interactive calendar in Section 09 and gets refreshed annually.
Nine questions to ask before hiring a landscaper /resources/how-to-choose-a-landscaper/	2	A buyer's guide that ProGround happens to answer well. Written to be genuinely useful even to someone who hires a competitor.
What belongs in a commercial maintenance contract /resources/commercial-maintenance-contract-guide/	2	Scope, frequency, response times, exclusions, billing. Aimed at property managers and HOA boards.

Utility pages

URL [/about/](#) **The trust anchor for both Google and the buyer.**

H1 Meet Andrew Lee, owner of ProGround Land Management

TITLE About Andrew Lee | ProGround Land Management

META ProGround was started in Denham Springs to be the kind of landscaping company its owner would want working at his own home. Meet Andrew Lee.

CONTENT Andrew's founder statement runs here almost verbatim, in first person, lightly tightened for reading on screen. It is the best written thing in the intake and it should not be paraphrased into marketing language. Required alongside it: a real photograph of Andrew, ideally on a job site rather than a studio portrait, 5+ years of experience, the October 2025 founding, owner operated with crew help, one work truck, commercial grade equipment, 100+ homes served, and the fact that Andrew personally meets customers, estimates and plans jobs. Close with the three differentiators and a direct call to action to reach him.

URL [/how-we-work/](#)

H1 How a ProGround project works, start to finish

TITLE Our Process | Written Scopes & Scheduled Work | ProGround

META Photos and details, a property visit, a written estimate with a defined scope, digital approval, scheduled work and follow up. Here is exactly what to expect.

CONTENT Six steps, each with what ProGround does, what the customer does, and roughly how long it takes. This page exists to answer the price objection with process rather than discount, and to answer the second unspoken objection in this trade, which is whether anyone will show up.

URL [/pricing/](#) **Rare in this trade. Treat it as a competitive weapon.**

H1 ProGround pricing

TITLE Landscaping Prices in Baton Rouge | ProGround

META Real starting prices for renovations, drainage, grading, mulch, cleanups and monthly maintenance plans across Greater Baton Rouge. No obligation estimates.

CONTENT Every starting price from Section 01 in one table, each row linking to its service page. Then a section on what moves a price up or down. Then the maintenance plan tiers. Then the mandatory pricing footnote. Then free estimates, no trip fee, no diagnostic fee, and accepted payment methods. Publishing prices costs a few tire kicker calls and wins the customers who were quietly comparing three companies at midnight.

URL [/gallery/](#)

H1 Before and after: real ProGround projects

TITLE Before & After Landscaping Projects | ProGround

META Real ProGround projects across Baton Rouge, Denham Springs and Prairieville. See the before, the after and what the work involved.

CONTENT Filterable by service and by city. Every project entry gets a before and after pair, the service performed, the city, and two or three sentences of what the job actually involved. A gallery of pretty photographs is worth little. A gallery where each project explains the problem and the fix is a sales tool. Only real ProGround work, never stock photography, never a competitor's image.

URL [/reviews/](#)

H1 What ProGround customers say

TITLE Customer Reviews | ProGround Land Management

META Read verified Google reviews from ProGround customers across Greater Baton Rouge, then leave one of your own.

CONTENT All ten reviews reproduced word for word with the reviewer name as it appears on Google and the relative timing. No editing, no trimming for length, no invented cities. Review schema on each. A link to the Google profile so a visitor can confirm they are real, and a direct review link for customers. Flag one correction for Andrew: the Vilma Lally review names the company as ProLand Management. Reproduce it exactly as written and never silently correct a customer's words.

URL [/faq/](#)

H1 Frequently asked questions

TITLE Landscaping FAQs | ProGround Land Management

META Service areas, pricing, maintenance agreements, drainage work and what to expect from a ProGround estimate, answered plainly.

CONTENT Andrew's ten answers from the intake, grouped into Services, Pricing and Plans, Scheduling and Access, and Working With Us. Every page level FAQ from every other page also appears here so this becomes the single deepest answer page on the site, which is exactly what answer engines cite. Question and answer text must match the source page character for character where they overlap.

URL [/request-estimate/](#) **The number one ranked action on the site.**

H1 Request your free estimate

TITLE Request a Free Estimate | ProGround Land Management

META Tell us about the property, upload a few photos and pick a preferred time. Free estimates, same day response, no trip fee.

CONTENT The full conditional form from Section 10 and almost nothing else. Trust strip above the form: free estimates, same day response, no trip fee, 100+ homes served. No navigation distractions in the form column. Phone and text as secondary options in the sidebar.

URL /contact/

H1 Contact ProGround Land Management

TITLE Contact ProGround | Baton Rouge & Denham Springs

META Call or text (225) 324-8252, email info@progroundland.com, or send the details of your property. Same day response, free estimates.

CONTENT Phone as a tap to call link, a text link on mobile, the public email, hours stated as inquiries answered 24/7 with same day response, the coverage map, the city served list, and a short form. City and parish only. No street address anywhere on this page.

Legal. /privacy-policy/ and /terms/. Real policies covering what the forms collect, how photos uploaded through the form are used, text message consent, and analytics. These pages count toward site completeness and they matter more than they look, because a form that collects a property address and photographs is collecting real data.

Thank you page. /thank-you/, set to noindex. Confirms the submission, states the same day response commitment, tells the visitor exactly what happens next, offers the phone number for anything urgent, and links to the gallery and the relevant resource article so the visitor keeps reading instead of going back to a competitor's tab. This is also where conversion events fire.

404 page. A real 404 with the header, a short apology, a search box and links to the nine services and six cities. Never redirect a missing page to the homepage, because Google reads that as a soft 404.

The design system

Andrew asked for a site that shocks homeowners and has things 99 percent of landscapers do not have. That does not come from effects. It comes from a coherent visual idea executed with more discipline than anyone else in this market has bothered with. The full color and type specification lives in the ProGround Brand Guide, which is the companion document to this one. This section is about how the site is built out of it.

The design thesis

Land, measured

ProGround does not just plant things. It reads ground and moves water. The visual language comes from that world: survey lines, contour intervals, grade marks, elevation callouts, plan view drawings. A thin contour line motif runs through the site as its structural device, marking section breaks, framing images, and labeling data. It is the one memorable thing, and it is true to the business rather than decorative.

Everything around that motif stays quiet. Generous white space, disciplined type, large photography, no gradients, no glassmorphism, no floating three dimensional cards, no animated blobs.

Why the site is not a dark site

The logo is bright green on near black, and the obvious move is to build the whole site that way. Do not. A full dark site with a single neon green accent is the most predictable execution available, it is what a dozen landscaping template sites already look like, and green at that saturation on large dark areas reads cheap at scale rather than premium. Instead: **a light, editorial base with dark bands used as punctuation.** The dark surface appears in the header, the footer, the proof section, the conversion blocks and the full bleed image captions. That way the brand's dark and green pairing arrives as a deliberate accent four or five times per page instead of as wallpaper, and the photography of green plant material has somewhere bright to live.

Layout

- **Grid.** Twelve columns, 1,280 pixel maximum content width, 72 pixel gutters on desktop, 24 on mobile. Full bleed sections break the grid only for photography and dark bands.
- **Vertical rhythm.** An eight pixel base unit. Section padding of 128 pixels on desktop, 72 on mobile. Consistency here is most of what separates an expensive looking site from a cheap one.
- **Asymmetry on purpose.** Content sections run seven columns of text against five of image, alternating side each section. A perfectly centered stack of full width sections is the template look.
- **One idea per screen.** No section should require the visitor to hold two thoughts at once.

Type scale

ROLE	FACE AND SETTING	DESKTOP	WHERE IT APPEARS
Display	Archivo, width 88, weight 800, tracking minus 2 percent	60 to 76 px	H1 on the homepage and money pages
Section head	Archivo, width 90, weight 700	36 to 44 px	H2
Subhead	Archivo, weight 600	22 to 26 px	H3, card titles
Eyebrow	Archivo, weight 600, uppercase, tracking 18 percent	12 px	Section labels, mirrors the logo lockup
Body	IBM Plex Sans, weight 400, line height 1.65	17 to 18 px	All paragraphs. Never below 16 px anywhere.
Lead	IBM Plex Sans, weight 400	21 px	Intro paragraph on every page
Data and captions	IBM Plex Mono, weight 500	13 to 15 px	Prices, measurements, contour labels, photo captions, form helper text

Archivo is a variable grotesque with a real width axis, which is what lets it echo the compressed weight of the wordmark without imitating it. IBM Plex Mono for prices and measurements is the survey drawing reference and it is the detail that will make the site look considered. Both are self hosted as variable woff2 files, per Section 12. No font loads from a third party origin.

Color application

SURFACE	RULE
Page background	Bone, the warm off white. Never pure white for large areas. Cards sit on pure white so they lift.
Dark bands	Deep Field. Used four to five times per page maximum: header, proof section, conversion block, footer, and one image feature.
Green	Growth Green on dark surfaces only, at small sizes: eyebrows, active states, contour accents, icon strokes, the slider handle. On light backgrounds use Turf Deep for any green text. The bright logo green never sits on white as text.
Blue	Survey Blue is the water color. Reserve it exclusively for drainage and grading content, water flow diagrams and the drainage diagnostic tool. Never use it as a general link color. That restraint is what makes the drainage sections feel like a distinct capability.
Buttons	Primary is Deep Field with white text on light backgrounds, and Growth Green with Deep Field text on dark backgrounds. Secondary is a one pixel outline. No gradients on any button, ever.

Photography direction

- **Only real ProGround work.** No stock photography of gardens anywhere on the site, including backgrounds. A visitor in Bocage can tell that lawn is not in Louisiana.
- Wide establishing shots of finished properties, shot from where a visitor would stand at the curb. That is the angle the buyer imagines.
- Before and after pairs framed from the identical position, same lens, same time of day. This is the single most valuable asset type on the site and Section 15 gives Andrew a shooting protocol.
- Detail shots: a clean bed edge, fresh mulch against turf, a catch basin set flush, a crisp trim line. Detail shots are what justify the price.
- Process shots of work underway, including equipment and crew, because they prove the work is real.
- Warm late afternoon light. Never a midday photo with hard shadows and blown highlights.
- Andrew's face appears at least three times: about page, homepage, and the estimate page.

Motion

One orchestrated moment, then restraint. The homepage hero reveals with the before image, then the after wipes across on load, once, in under 900 milliseconds. That single move states the entire value proposition before a word is read. Everywhere else: subtle scroll reveals at 12 pixels of travel and 240 milliseconds, hover states that change color and nothing else, and a sticky header that shrinks on scroll. Every animation respects the reduced motion setting. No parallax, no counters that tick up, no typewriter text, no scroll jacking.

Component library

COMPONENT	SPECIFICATION
Header	Deep Field. Logo left. Nav: Services, Service Areas, Who We Serve, Pricing, Gallery, About. Phone as a mono type tap to call link, then the estimate button in Growth Green. Shrinks on scroll. On mobile the phone number and the estimate button stay visible at all times.
Service card	White, one pixel border, no shadow, no radius above 4 pixels. Photo, name, one line, starting price in mono type. Entire card is the link. Hover lifts the border to Deep Field, nothing else moves.
Before and after slider	The signature interaction. Draggable divider with a Growth Green handle, keyboard operable with arrow keys, labeled Before and After in mono type, and a caption naming the service and the city.
Price block	Mono type figure at 32 pixels, the service name above it, cost drivers listed below, then the mandatory pricing footnote in small type. Identical on every page it appears.
Proof strip	Dark band. Three reviews, verbatim, reviewer name in mono type, no star graphics larger than the text, link to the Google profile.
Contour divider	The signature graphic device. Thin contour lines that shift density between sections. Purely decorative, so it carries empty alt text and no semantic weight.
FAQ accordion	Open by default on mobile if there are fewer than six items, so the text is crawlable and readable without interaction. Visible text must match the schema exactly.

Conversion block	Dark band, headline, the short form inline, phone and text as alternates, and one trust line. Appears at the end of every page without exception.
Footer	Deep Field. Logo, one line description, phone, email, hours, city served list, service list, legal links, social links, and the line describing ProGround as locally owned in Denham Springs. City and parish only, no street address.

Mobile

Most of this traffic arrives on a phone, often standing in the yard being discussed. Sticky bottom bar with two actions: Call and Request estimate. Tap targets of 48 pixels minimum. Photo upload from the camera roll must work in one tap. Body type never smaller than 16 pixels. The before and after slider must work under a thumb, not just a mouse. Test the whole site at 375 pixels wide before anything else.

Signature features

Andrew asked for things 99 percent of landscaping websites do not have. Every feature below is derived from something he already does on the phone or something a real customer already praised him for. That is the difference between a gimmick and a feature: a gimmick decorates the site, a feature turns a phone conversation into something that works at two in the morning while Andrew is asleep.

| Tier one: build for launch

1. The Yard Water Diagnostic

The flagship. Nothing else in this market comes close. A short guided tool on the drainage and grading pages that asks the exact questions Andrew asks on the phone: where is the water collecting, when does it happen, how long does it stay after rain, do you know where it currently drains, are gutters or downspouts involved, has anything been attempted before. It returns a plain language read on the likely cause, which solution family fits, a starting cost range, and what a site visit would need to confirm.

- Every answer path must carry the same honest caveat: this is a starting read based on what you described, and water problems are confirmed on the property, not on a screen.
- The result hands off directly into the estimate form with the drainage branch preselected and the answers already carried across, so the visitor never retypes anything.
- Andrew must approve every outcome path in writing before launch. He is the one standing behind the diagnosis.
- The tool page also earns links, which is exactly what the head terms need.

2. Photo to Proposal, same day

Andrew's strongest review describes it precisely: the customer sent a few photos, described what she wanted, got a quote the same day, and the work was done within a week. That is a productizable offer and almost nobody advertises it. Name it, put it on the homepage, and build the mechanism: a photo first upload path, on mobile straight from the camera roll, plus a text link that opens the messaging app with the number and a starter message already filled in. State the promise honestly as same day response, which is Andrew's own stated standard, not a same day price on every job.

3. The before and after library

Draggable comparison sliders throughout the site and a filterable gallery of them, tagged by service and by city. Each entry carries two or three sentences about what the job involved. Most landscaping sites show a grid of finished photos. Almost none show the before, because the before is where the value is visible. This is also the answer to the price objection that words cannot deliver.

4. Coverage checker

A postal code field on the service areas page, the contact page and in the estimate form. Enter it and get one of three honest answers: fully in the service area with a same day response, at the edge of the 45 minute radius where a mobilization fee may apply, or outside the area with a straight no and no wasted phone call. Built from a static list of postal codes for the nine areas Andrew named, so it needs no third

party service and cannot break. Feeding the result into the form means Andrew stops driving to jobs he should have declined.

5. The maintenance plan builder

Three inputs: property size band, service frequency, and which services to include from Andrew's list. Output is an estimated monthly range that starts at the real \$145 floor, a plain summary of what is included, and a single button that sends the whole configuration to Andrew as a lead. Rules that keep it honest: it always says estimated range, it never produces a single firm number, it always ends with confirmation after a property visit, and Andrew signs off on every range before it goes live. This directly attacks the objection he named, because it turns an abstract annual commitment into a specific monthly number a household can decide on.

| Tier two: build within six weeks of launch

6. The South Louisiana property calendar

An interactive month by month view of what a property in this climate needs and when. Opens on the current month. Each month links to the service that handles it. Pairs with the calendar resource article and gives the site a reason to be revisited. Optionally offer a monthly email reminder, which builds a list Andrew owns rather than one that lives on a social platform.

7. The sample scope document

A real ProGround estimate and scope of work, with the customer details removed and with that customer's permission, shown on the process page. Andrew's third differentiator is that customers get written estimates, defined scopes and digital approvals. Showing the actual document proves it in a way that no amount of describing it can. No competitor in this market will do this.

8. The Christmas lighting configurator

Roofline, trees and shrubs, columns, walkways, or a combination, plus the power access question Andrew asks. Returns a range from the \$300 starting point and books a fall consultation. Launches in September with the seasonal page.

9. Project cost explorer

Service plus property size returns the published starting price and a typical range. Built entirely on figures Andrew has approved in writing and nothing else. Every output carries the mandatory pricing footnote. If Andrew is uncomfortable publishing upper bounds, ship the starting figures only. Never generate a number the business has not agreed to honor.

The honesty gate on every calculator

Anything on this site that produces a number or a diagnosis is Andrew making a statement to a customer before he has seen the property. Three rules, no exceptions. Every output says estimate and says what would confirm it. No tool produces a single firm price. Andrew approves every range and every diagnostic path in writing before launch. A tool that overpromises does more damage to a premium positioning than having no tool at all.

Deliberately not built

- **Self scheduling calendar.** Andrew explicitly wants customers to request a preferred time that he then confirms. Build the request, not the booking.
- **Live chat or an AI chatbot.** A same day human response from the owner is the premium signal. A bot undercuts it.
- **Financing widget.** ProGround does not offer financing.
- **Countdown timers, spinning discount wheels, exit popups.** Wrong audience, wrong positioning, and they slow the site down.
- **An instant firm price on landscape projects.** Every property is different and Andrew said so plainly. A firm number online would either lose money or lose trust.

The lead engine

Andrew ranked the actions he wants from a visitor: submit a form first, then call, then text, then book online. The site is built to that ranking. The form is the product here, and it is built directly from the questions he already asks before he will quote a job.

Two forms, not one

FORM	WHERE	FIELDS
Short form	Every page conversion block, homepage, sidebars	Name, phone, property address, service needed, describe the problem, photo upload. Six fields. Nothing else. It exists to be finished.
Full estimate form	/request-estimate/ and every service page button	The complete conditional flow below, in four steps with a progress indicator.

The short form submits to the same place and simply leaves the conditional questions unanswered. A short form completed beats a long form abandoned, every time.

The full form, step by step

Step 1: the property

- Name, required.
- Phone, required. Checkbox: it is fine to text this number, default on, since Andrew accepts texts.
- Email, required.
- Property address, required, with the coverage checker running on the postal code.
- Residential or commercial, required. This single choice changes the rest of the form.

Step 2: what you need

Service selection, required, exactly as Andrew listed it: Landscape Renovation, Landscape Installation, Drainage Solution, Grading and Yard Leveling, Annual Property Maintenance, Residential Lawn Maintenance, Commercial Property Maintenance, Mulch or Pine Straw Installation, Decorative Rock Installation, Landscape Bed Cleanup, Large Property Mowing, Christmas Light Installation, Other. When a visitor arrives from a service page, that service is preselected.

Step 3: the conditional branch

These are Andrew's own follow up questions. Only the selected branch appears.

IF THEY SELECT

ASK

Recurring maintenance, residential or commercial	What areas of the property need to be maintained. How frequently do you want service. Are you currently using another lawn or property maintenance company. Are you interested in an Annual Property Maintenance Agreement with predictable monthly billing. For commercial: what type of property is it, and who is the decision maker.
Landscaping or installation	Are we renovating existing landscaping, installing new, or both. Are there existing plants or materials that need to be removed. Are there particular plants, materials, colors or styles you want. Would you like mulch, pine straw, decorative rock, edging or other features included.
Drainage or grading	Where is the water collecting. When does the drainage problem occur. How long does water typically remain after rainfall. Do you know where the water currently drains. Are gutters or downspouts contributing. Have any drainage or grading repairs been attempted before.
Christmas lights	What areas would you like decorated. Roofline, trees and shrubs, columns, walkways, or a combination. Is there accessible exterior power near those areas.

Step 4: scope, timing and access

- Tell us a little about what you would like done or the problem you are trying to solve. Required, free text.
- What would you like the finished property or project to look like or accomplish. Optional, free text.
- **Photo upload.** Multiple files, camera roll on mobile, generous size limit, clearly optional but visually encouraged. This is the highest value field on the form because it is what lets Andrew quote the same day.
- How soon are you looking to have the work completed. As soon as possible / Within 2 to 4 weeks / Within 1 to 3 months / Just gathering estimates and planning ahead.
- Preferred day and time window for a visit. Framed as a request, with the line: we will confirm your appointment, you are not booking a locked slot.
- Anything we should know about property access, gates, pets, HOA requirements, utilities, drainage easements or other site conditions. Optional.
- **Approximate investment range.** Optional and clearly marked optional. Under \$1,000 / \$1,000 to \$2,500 / \$2,500 to \$5,000 / \$5,000 to \$10,000 / \$10,000 or more / Not sure yet. **Show this field only for renovation, installation, drainage and grading.** Never on a lawn maintenance lead. Andrew was specific about this and he is right: asking a mowing customer for a budget range reads as a shakedown, while asking a renovation customer saves him an hour of driving.

Rules the form must obey

- **Never fabricate an endpoint.** Submissions go to andrew@progroundland.com. That address is never displayed on the site. If the handler is not wired at build time, flag it rather than shipping a form that silently fails.
- Five fields are the ones that matter most, and they must never be buried: service needed, property address, description of the problem or desired result, photos, timeframe.
- Progressive disclosure. One step visible at a time, with a progress indicator, so a fourteen question form never looks like a fourteen question form.
- No account creation, no password, no login. Ever.

- Real labels above every field, never placeholder text as the only label. Inline validation on blur, not on every keystroke.
- Anti spam through a honeypot field and a timing check, not a puzzle. Do not make a paying customer identify traffic lights.
- Instant confirmation on screen plus an automatic email that restates what they submitted, states the same day response commitment, and gives the phone number for anything urgent.
- Andrew's notification email arrives formatted for a phone: service, address, timeframe, description and photo links at the top, everything else below.
- Every submission fires a conversion event. Calls and text taps are tracked as events too, or half of the results become invisible.
- The form carries a hidden field for the page it was submitted from, so page level performance is measurable.

Why this form is the competitive advantage

Andrew's competitors have a name, email and message box. This form collects everything he needs to price a job, plus photographs, before he has spoken to anyone. Combined with the same day response he already delivers, it means a homeowner can describe an overgrown bed at ten at night and have a real number the next day. That is the whole business model made into software.

Technical search foundation

Part B begins here. Everything from this point goes to the build environment after the design is approved by Andrew.

Crawl and indexing files

Three files at the root. `robots.txt` allows all crawlers including the answer engines, blocks any build or prototype directories, and points to the sitemap. `sitemap.xml` lists every indexable page with an accurate last modified date. Homepage priority 1.0, the Baton Rouge page and the six phase one money pages at 0.9, everything else 0.7 to 0.8. Never list the thank you page. Keep it in sync with reality on every deploy.

`llms.txt` is a plain language brief so answer engines understand and cite the site. It should name ProGround, what it does, where, for whom, the owner, the phone number and the key pages. This one file is a meaningful edge right now because almost no local trade business has one, and Andrew's stated ambition is to be found where competitors are not.

Per page metadata, every single page

- Exactly one H1. Logical heading order with no skipped levels.
- Unique title under 60 characters, built on the mapped keyword. Pattern: primary keyword, then city or qualifier, then ProGround.
- Unique meta description under 155 characters: benefit, keyword, soft call to action.
- Self referencing canonical using the absolute URL.
- Open Graph and Twitter card tags, plus a branded share image at 1200 by 630. Without it, every link shared to Facebook or in a text message previews blank, which matters more for a local trade than for almost any other business.
- Robots meta set to index, follow, with large image preview allowed. Audit every page before launch for an accidental noindex.
- Language attribute set, UTF 8 charset, responsive viewport meta.

Structured data

A connected schema graph on every page. Real contact data only, and no street address anywhere in it. The core node:

```
{
  "@context": "https://schema.org",
  "@graph": [
    {
      "@type": ["LocalBusiness", "LandscapingBusiness"],
      "@id": "https://progroundland.com/#business",
      "name": "ProGround Land Management",
      "url": "https://progroundland.com/",

}

```

TYPE	WHERE AND WHY
Service	Every service, money and audience page. Include serviceType, provider pointing at the business node, and areaServed.
FAQPage	Everywhere FAQs appear. The schema text must match the visible text character for character or the rich result is invalid.
BreadcrumbList	Every page below the homepage.
AboutPage and Person	The about page. Andrew is the experience and trust anchor for the whole domain.
Review and AggregateRating	Only on the reviews page, only for the ten real reviews, author names exactly as they appear on Google. Self hosted reviews rarely earn star snippets, that is the Google profile's job, but they strengthen how the business entity is understood.
ImageObject	Before and after gallery entries, with real captions.
CollectionPage	The service areas hub, the who we serve hub and the resources hub.

Name, phone and location consistency

ProGround Land Management. (225) 324-8252. Denham Springs, LA. One spelling, one phone format, one location statement, byte identical on the site, in schema, on the Google profile and in every directory listing. The Google profile category stays Landscaper as the primary, with relevant secondaries added. Inconsistency here is the most common reason a local business stalls at position eight and never understands why.

Performance budget

Target 90 or above on desktop, 85 or above on mobile, accessibility and SEO at 95 or above, layout shift at effectively zero. A landscaping site is a photography site, so images are the whole battle.

- **Images to WebP**, resized to the actual display size. A 2,700 pixel photo in a 560 pixel slot is the single biggest mobile speed problem there is. Do not over compress into visible artifacts either, because the photography is the sales tool.
- **Width and height attributes on every image.** When using an aspect ratio in CSS, also set height to auto, or the height attribute overrides it and the crop goes wrong.
- Lazy load everything below the fold. Set high fetch priority on the hero image. Use a source set with sizes so a phone never downloads a desktop image.
- **Self host both fonts as variable woff2** and preload the critical face. A late loading third party font reflows every headline on the page and is a top cause of layout shift.
- Defer heavy third party embeds, including any map, behind an intersection observer so they load only when scrolled near. An eagerly loaded map can cost megabytes.
- Before and after sliders load the after image at high priority and the before image lazily.
- Serve over HTTPS with modern protocol support and a content delivery network if the host offers one. Correct MIME types for WebP and woff2, compression on, one year immutable cache on static assets, short cache on HTML.
- Do not add a rewrite rule that strips file extensions and redirects every internal link. Author clean directory style URLs from the start instead.
- Never point the 404 handler at the homepage. Ship a real 404 page.
- **Cache busting.** Assets are cached for a year as immutable. Replacing a file with the same name means appending a version query to every reference in the same change, or visitors keep seeing the old file.

Accessibility standard

- **Contrast at 4.5 to 1 minimum** for normal text. The bright brand green fails on light backgrounds at small sizes, which is exactly why the brand guide defines a darker green for text on light. Ratios for every approved pairing are printed in that document.
- One H1, a main landmark, a skip link, visible focus outlines on every interactive element, logical heading order.
- Descriptive alt text on meaningful images, naming the service and the location where true. Empty alt on decorative elements including every contour divider.
- The before and after slider must be operable by keyboard with arrow keys and expose its position to assistive technology.
- Real label elements on every form field. Errors described in text, never by color alone.
- Tap targets of 48 pixels minimum. Phone numbers as tap to call links in one canonical format.
- Adjacent sections with similar backgrounds get a divider or a shade change so they do not blend.
- Respect the reduced motion setting for every animation including the hero reveal.

Conversion rules for every page

- Phone number visible in the header as a tap to call link on every page, in one format.
- A call to action above the fold and another at the end of every page. One primary action per page, never two competing ones.
- Andrew's ranking is honored everywhere: form first, call second, text third, request a time fourth. The form is always the visually dominant action.
- Real trust signals next to every call to action: a genuine review, 100+ homes served, locally owned in Denham Springs, free estimates, no trip fee, same day response.
- Sticky bottom bar on mobile with Call and Request estimate.
- Never place a call to action before the visitor has been given a reason. The hero is the exception, because arriving on a service page is itself the reason.
- Track form submissions, call taps and text taps as separate events. Andrew should be able to see which page produced which lead.

SECTION 15

Assets required from Andrew

Andrew flagged in the intake that he could not upload his photos and videos and asked to be reminded about before and after images and the logo. Nothing on this list is optional, and the photography is the difference between a good site and the best landscaping site in the market.

The asset list

ASSET	PRIORITY	SPECIFICATION
Logo files	Blocking	Vector if it exists, otherwise the highest resolution raster available. Needed on dark and on light. See the brand guide for the required variants.
Before and after pairs	Blocking	Minimum eight pairs for launch, ideally fifteen. Shooting protocol below. Each pair needs the city and the service.
Portrait of Andrew	Blocking	On a job site, natural light, looking at the camera, no sunglasses. Used on three pages.
Finished property photos	Blocking	Twelve or more wide shots from the curb, late afternoon light, one per service where possible.
Detail shots	High	Bed edges, fresh mulch lines, a catch basin set flush, clean trim lines, a finished rock border.
Drainage work in progress	High	Trench and pipe, basin installation, before water and after rain if it exists. Nobody in this market has these photos.
Crew and truck	High	Proof the operation is real. One good truck photo does more than a paragraph.
Video	Medium	Short vertical clips are fine. Used muted, as background loops or in the gallery. Never autoplay with sound.
Christmas light photos	Seasonal	Needed by September for the seasonal page.
Sample scope document	Medium	One real estimate with the customer details removed, with that customer's permission.

The before and after shooting protocol, for Andrew

1. Before any work starts, stand at the curb or the spot where the property is normally seen. Take one wide horizontal photo. **Note where you stood.**
2. Take two closer shots of the worst areas.
3. When the job is finished, stand in the same footprint and take the same wide shot again, at roughly the same time of day.
4. Late afternoon is best. Avoid noon, avoid rain, avoid a wet driveway in one shot and a dry one in the other.
5. Horizontal for the website, and shoot a vertical version too for social.

6. Send the pair together with the city and the service noted. Wrong pairs are worse than none.

Six matched pairs from the same standing point are worth more than sixty pretty photos, because the pair is what makes the price feel small.

Open questions, ask Andrew once

QUESTION	WHY IT BLOCKS SOMETHING
Does ProGround carry general liability insurance	Top three trust factor for a property owner. Publish it if it is real, say nothing if it is not.
Google Analytics and Search Console access	He answered ask me about this in person. Get it before launch, because without Search Console the whole measurement loop in Section 17 is blind.
Approval of every calculator range	Every tool in Section 09 states a number in his name.
Manager access to the Google Business Profile	He offered it. Take it. It is the single strongest lever on the map pack.
Permission for named neighborhoods	If any gallery entry or testimonial names a specific community, get that customer's approval in writing.
Text message consent language	The form has a texting checkbox, so the privacy policy needs to cover it.
Preferred handling of the Vilma Lally review	It names the company as ProLand Management. Publish it verbatim, and separately consider asking her to update it on Google.

Domain and email, handle carefully

progroundland.com is at GoDaddy and Andrew's business email runs on the same domain. Move the site without touching the mail records. Point the web records only, verify mail delivery before and after the change, and do the cutover at a low traffic hour. The intake form contains his account password in plain text: do not store it anywhere in the project, and have him change it once the transfer is complete.

Build order and verification

Order of work

1. **Verify reality first.** Fetch the live progroundland.com, confirm what is actually deployed there and what is indexed, and take a full backup before changing anything. Do not trust any brief about the current state, including this one.
2. **Run the competitive check live.** Search the priority terms and record who ranks and how strong they are. Andrew named Southern Grasshoppers, Lawnscape Solutions and Flora Landscape Contractors. Look at each: page count, whether they have city pages, whether anyone has written a real drainage page, whether anyone publishes prices, whether anyone shows before and after evidence. Adjust the keyword priorities in Section 03 against what you find. In a soft niche the head term is reachable sooner than the priority order assumes.
3. **Design in Claude Design.** Homepage, one service page, one city page, one money page and the estimate form. Get those five approved by Andrew before building anything else, because they define every other page.
4. **Build the phase one set,** 36 pages, content complete and unique. No lorem, no placeholder photography that ships.
5. **Technical pass.** Schema, metadata, sitemap, robots, llms.txt, performance, accessibility.
6. **Wire the forms and the tools.** Test every conditional branch and every submission path with real deliveries to Andrew's inbox.
7. **Launch.** Submit the sitemap, request indexing on the homepage and the Baton Rouge page.
8. **Phase two over the following six weeks.** The remaining money pages, parish pages, neighborhood pages, audience pages and resource articles, one batch a week.
9. **Then the loop.** Section 17.

Verification checklist. The build is not done until every line passes.

CHECK	
☐	Phase one ships at least 30 indexable pages, each genuinely unique and useful. No city page reads like another with the name swapped.
☐	Every keyword cluster in Section 03 has exactly one owning page. No two pages compete for the same term.
☐	Every page is in the sitemap. No page carries a stray noindex. The thank you page carries one deliberately.
☐	Performance at 90 or above desktop and 85 or above mobile on the homepage, the Baton Rouge page and the gallery. Accessibility and SEO at 95 or above.
☐	Layout shift effectively zero: image dimensions set, fonts self hosted and preloaded, embeds deferred.
☐	All schema validates. Every FAQ block matches its visible copy exactly.
☐	Zero broken internal links. No orphan pages. Every page within three clicks of the homepage.

-
- ☐ Unique title under 60 characters, unique description under 155, canonical and Open Graph tags, one H1, on every page.
-
- ☐ Name, phone and location identical sitewide and identical to the Google Business Profile. Phone is a tap to call link everywhere.
-
- ☐ **The street address appears nowhere on the site or in schema.**
-
- ☐ Accessibility: contrast, main landmark, skip link, focus outlines, alt text, labeled forms, keyboard operable slider.
-
- ☐ robots.txt, sitemap.xml, llms.txt, a real 404 page and the share image all present and correct.
-
- ☐ Every form path tested end to end with a real delivery, including every conditional branch and photo upload.
-
- ☐ No tech stack named anywhere a visitor or a crawler can see.
-
- ☐ No fabricated fact anywhere: no invented reviews, credentials, licenses, insurance claims, job counts or local details.
-
- ☐ Every calculator output approved by Andrew in writing.
-
- ☐ Analytics installed, with form submissions, call taps and text taps tracked as events.
-
- ☐ Final report delivered: page list, keyword to page map, performance scores, and the off site list below.
-

Off site: what the website cannot do

The website is roughly half of local ranking. The map pack is mostly won off site. This list is Andrew's job, or Reid's on his behalf, and it is where the results actually come from.

1. **Google Business Profile.** It is already verified and Andrew owns it, which puts him ahead of most new businesses. Now complete it to 100 percent: keep Landscaper as the primary category, add relevant secondaries, list every service, confirm it is set as a service area business with the address hidden, add the service areas, add real photos including Andrew's face, and write a description that leads with the city and the service and contains no URL, no phone number and no capitalized shouting, because Google rejects those.
2. **Google Search Console.** Add a domain property, verify by DNS record, submit the sitemap, request indexing on the homepage and the Baton Rouge page, and check the pages report for anything left over from the old site.
3. **Reviews are the strongest lever available.** Ten reviews at five stars is a real asset already. Keep a steady trickle rather than a burst, and ask customers to name the service and the city in their own words, since a review that says drainage in Denham Springs is worth several that say great job. Never incentivize or fabricate one. Reply to every single review.
4. **Citations** with identical contact data: Bing Places, Apple Business Connect, Yelp, Nextdoor, Facebook, and local trade and chamber directories. Several of these rank on their own, so a listing doubles as exposure.
5. **Backlinks, manual and safe only.** Local suppliers, the chamber, any community sponsorship, and a website credit in the studio's own portfolio. Never buy links.
6. **Redirect any stray domain** to the live site.
7. **Bing Webmaster Tools:** submit the sitemap there too, since it feeds Bing and several answer engines.
8. **Social feeds the site, not the reverse.** The Instagram and Facebook accounts should push people to the site, and the before and after pairs shot for the site are the content for both.

Honest timelines. Tell Andrew these numbers and no others.

MILESTONE	REALISTIC TIMING	DEPENDS ON
Indexed, brand name searchable	Days after launch	Sitemap submitted and crawled
Map pack movement	Weeks	The profile is already verified, so reviews and completeness drive it now
Service crossed with city long tail	2 to 8 weeks	Page quality and depth
Problem terms and resource articles	1 to 3 months	Content depth and early links
Head terms in Baton Rouge	Months, not weeks	Links, reviews, sustained content, competitor strength

Never promise a position or a date. Google controls both. What can be promised is that every controllable factor will be handled properly, which is more than any competitor in this market is doing.

| The ongoing loop

This is a program, not a delivery. Every few weeks: review Search Console for queries, impressions and positions, find the gap against whoever holds the top spots, then act on the site by deepening thin pages, adding pages for newly found gaps, expanding FAQs, publishing the next resource article and strengthening internal links. Meanwhile the off site levers keep moving. Redeploy, recheck, repeat.

SECTION 18

The opening prompt for Claude Design

Paste this as the first message with this manual and the brand guide attached.

Use the attached ProGround Land Management Build Manual as your complete methodology, and the attached ProGround Brand Guide as the visual system. Follow Part A exactly. Do not invent facts.

BUSINESS: ProGround Land Management
OWNER: Andrew Lee, owner operator
NICHE: Landscape renovation, drainage and grading, property maintenance
BASE: Denham Springs, Louisiana. Service area business, address hidden.
SERVICE AREA: Baton Rouge, Denham Springs, Prairieville, Walker, Central, Shenandoah, Livingston Parish, East Baton Rouge Parish, Ascension Parish
PHONE: (225) 324-8252, texting accepted
EMAIL: info@progroundland.com
HEAD TERMS: landscaping company baton rouge, landscape renovation baton rouge, drainage contractor baton rouge
PRIMARY GOAL: more landscape renovation jobs
RANKED ACTIONS: submit a form, then call, then text, then request a time
FEEL: professional, trustworthy, premium

WHAT TO DESIGN FIRST, in this order:

1. Homepage, per the brief in Section 05
2. /landscape-renovations/ as the service page pattern
3. /landscaping-baton-rouge/ as the city page pattern
4. /drainage-contractor-baton-rouge/ as the money page pattern
5. /request-estimate/ with the full conditional form from Section 10
6. The Yard Water Diagnostic from Section 09

RULES:

- Light editorial base, dark bands as punctuation. NOT a dark site.
- Contour line motif as the structural device. It is the signature.
- Archivo for display, IBM Plex Sans for body, IBM Plex Mono for prices and data. Self hosted.
- Green only as specified in the brand guide. Blue is reserved for water and drainage content only.
- Real photography only. Where an asset is missing, use a clearly labeled placeholder, never stock imagery presented as real work.
- No street address anywhere. City and parish only.
- No exclamation points. No invented reviews, credentials or claims.
- Every page ends with the conversion block.
- Design mobile first at 375 pixels, then scale up.

Ask me once for anything real that is missing. Then build.

One last thing

Andrew wrote that he wants the best landscaping website on the internet, one that shocks homeowners. The shocking part will not be an animation. It will be that a homeowner with six inches of standing water in the backyard finds a page that explains exactly why it is happening in clay soil, tells them what each fix costs, shows them the same problem solved on a street they recognize, and lets them send three photos and get a real answer the same day. That is what

nobody else in this market is doing, and every section of this manual exists to make that one experience possible.
